APPLICATION DOCUMENTATION

ONE

INTRODUCTION

LOOT is a plugin load order optimiser for TES III: Morrowind, TES IV: Oblivion, Nehrim: At Fate's Edge, TES V: Skyrim, Enderal: Forgotten Stories, TES V: Skyrim Special Edition, TES V: Skyrim VR, Enderal: Forgotten Stories (Special Edition), Fallout 3, Fallout: New Vegas, Fallout 4 and Fallout 4 VR. It is designed to assist mod users in avoiding detrimental conflicts, by automatically calculating a load order that satisfies all plugin dependencies and maximises each plugin's impact on the user's game.

LOOT also provides some load order error checking, including checks for requirements, incompatibilities and cyclic dependencies. In addition, it provides a large number of plugin-specific usage notes, bug warnings and Bash Tag suggestions for Wrye Bash.

While LOOT is able to calculate correct load order positions for the vast majority of plugins using only their content, it cannot do so for all plugins. As such, LOOT provides a mechanism for supplying additional plugin metadata so that it may sort them correctly. An online *masterlist* is provided to supply metadata for many plugins that need it, while users can make their own metadata additions, which are saved in their *userlist*.

LOOT is intended to make using mods easier, and mod users should still possess a working knowledge of mod load ordering. See Introduction To Load Orders for an overview.

TWO

INSTALLATION & UNINSTALLATION

LOOT requires Windows 7 or later. The official 64-bit releases raise this requirement to a 64-bit version of Windows 10 (1809) or later.

LOOT can be installed either using its automated installer or manually. If you are using the installer, just run it and follow the wizard steps. If installing manually, extract the downloaded archive to a location of your choice.

The official LOOT releases require the MSVC 2019 x86 redistributable or MSVC 2019 x64 redistributable to be installed, depending on whether you downloaded the 32-bit or 64-bit version of LOOT. The installer automatically downloads and installs the appropriate redistributable if you don't already have it installed, but if you use the LOOT archive then you will need to do so manually.

If LOOT was installed using the installer, then use the uninstaller linked to in the Start Menu to uninstall LOOT. If LOOT was installed manually:

1. Delete the files you extracted from the location you chose.

2. Delete the `LOOT` folder in your local application data folder, which can be accessed by entering `%LOCALAPPDATA%` into Windows' File Explorer.

INITIALISATION

When LOOT is run, it will attempt to detect which of the supported games are installed. If a *default game* has been set, LOOT will run for it, otherwise it will run for the same game as it last ran for. If the relevant game cannot be detected, or if there is no record of the last game LOOT ran for, it will run for the first detected game.

LOOT's initialisation can be customised using command line parameters:

--game=<game identifier>: Set the game to run for. If the supplied game identifier is recognised, the default and last game values are ignored. The game identifiers recognised by default are `Morrowind`, `Oblivion`, `Skyrim`, `Skyrim Special Edition`, `Skyrim VR`, `Fallout3`, `FalloutNV`, `Fallout4`, `Fallout4VR`, `Nehrim`, `Enderal` and `Enderal Special Edition`.

--game-path=<path>: Set the install path of the game identified by `--game`. This replaces any existing value stored in LOOT's settings.

--loot-data-path=<path>: Set the path to use for LOOT's application data storage. If this is an empty string or not specified, defaults to `%LOCALAPPDATA%\LOOT` on Windows and (in order of decreasing preference) `$XDG_CONFIG_HOME/LOOT`, `$HOME/.config/LOOT` or the current path on Linux.

--auto-sort: Once LOOT has initialised, automatically sort the load order, apply the sorted load order, then quit. If an error occurs at any point, the remaining steps are cancelled. If this is passed, `--game` must also be passed.

If LOOT cannot detect any supported game installs, you can edit LOOT's settings in the *Settings dialog* to provide a path to a supported game, after which you can relaunch LOOT to detect that game.

Once a game has been set, LOOT will scan its plugins and load the game's masterlist, if one is present. The plugins and any metadata they have are then listed in their current load order.

If LOOT detects that it is the first time you have run that version of LOOT, it will display a "First-Time Tips" dialog, which provides some information about the user interface that may not be immediately obvious.

3.1 Microsoft Store Compatibility

LOOT can work with copies of the supported games bought through the Microsoft Store, but there are some complications.

3.1.1 Older installs

Older versions of the Microsoft Store and Xbox apps install games inside `WindowsApps` and `ModifiableWindowsApps` folders (their exact location can vary). Games installed like this:

- may have an unreadable install directory between turning your computer on and running the game's launcher.

  If LOOT can't find your game, try running the game's launcher first.

- may use one of two locations to store its load order data, based on criteria that vary between games and which are not well understood. The two locations for each game are:

Game	Location 1	Location 2
Mor-rowind	N/A	N/A

Oblivion	`%LOCALAPPDATA%\`
	`Oblivion`
		`%LOCALAPPDATA%\Packages\BethesdaSoftworks.`
		`TESOblivion-PC_3275kfvn8vcwc\LocalCache\Local\`
		`Oblivion`

Skyrim Special Edition	`%LOCALAPPDATA%\`
	`Skyrim Special`
	`Edition MS`
		`%LOCALAPPDATA%\Packages\BethesdaSoftworks.`
		`SkyrimSE-PC_3275kfvn8vcwc\LocalCache\Local\Skyrim`
		`Special Edition MS`

Fallout 3	`%LOCALAPPDATA%\` `Fallout3`	`%LOCALAPPDATA%\Packages\BethesdaSoftworks.` `Fallout3_3275kfvn8vcwc\LocalCache\Local\Fallout3`
Fallout: New Vegas	`%LOCALAPPDATA%\` `FalloutNV`	`%LOCALAPPDATA%\Packages\BethesdaSoftworks.` `FalloutNewVegas\LocalCache\Local\FalloutNV`

Fallout 4	`%LOCALAPPDATA%\`
	`Fallout4 MS`
		`%LOCALAPPDATA%\Packages\BethesdaSoftworks.`
		`Fallout4-PC_3275kfvn8vcwc\LocalCache\Local\`
		`Fallout4 MS`

  LOOT may not select the correct location by default, in which case you'll have to manually configure the correct location as the game's local AppData path in LOOT's settings and then restart LOOT.

- require administrator privileges to write to the game's install directory.

  LOOT will be unable to apply sorted load orders for Morrowind, Oblivion, Fallout 3 and Fallout New Vegas unless it is run as an administrator.

Users with games installed like this are recommended to update their Microsoft Store and Xbox apps and reinstall the games to avoid these issues, which also affect other modding utilities.

3.1.2 Newer installs

Newer versions of the Microsoft Store and Xbox apps install games inside `<drive letter>:\XboxGames` by default. LOOT can detect default and non-default install locations.

3.1.3 All installs

For both old and new installs, the following games have each of their localisations installed in separate subdirectories:

- Morrowind

- Oblivion

- Fallout 3

- Fallout: New Vegas

LOOT has no way of knowing which it should use, so it will check each of those subdirectories in turn, using the order English, French, German, Italian, and Spanish (the latter two are not present for Morrowind), stopping at the first subdirectory it finds a copy of the game in.

LOOT looks for games using the following sources:

1. the install path configured for the game

2. the parent directory of the current working directory (e.g. if LOOT is at `Skyrim Special Edition\LOOT\ LOOT.exe` next to `Skyrim Special Edition\SkyrimSE.exe`).

3. the registry keys configured for the game

4. the install locations used by newer versions of the Microsoft Store and Xbox apps, checking each drive in the order they're listed by Windows. (On Linux each mount point is checked in the order they're listed in `/proc/ self/mounts`.)

5. the install locations used by older versions of the Microsoft Store and Xbox apps, checked using the packages' registry keys.

This means that if you've got the same game installed through the Microsoft Store and another source (e.g. Steam or GOG), LOOT will by default detect the latter first.

If LOOT's automatic game detection doesn't work correctly for you, you'll need to manually provide the correct install path in LOOT's settings and then relaunch LOOT.

THE MAIN INTERFACE
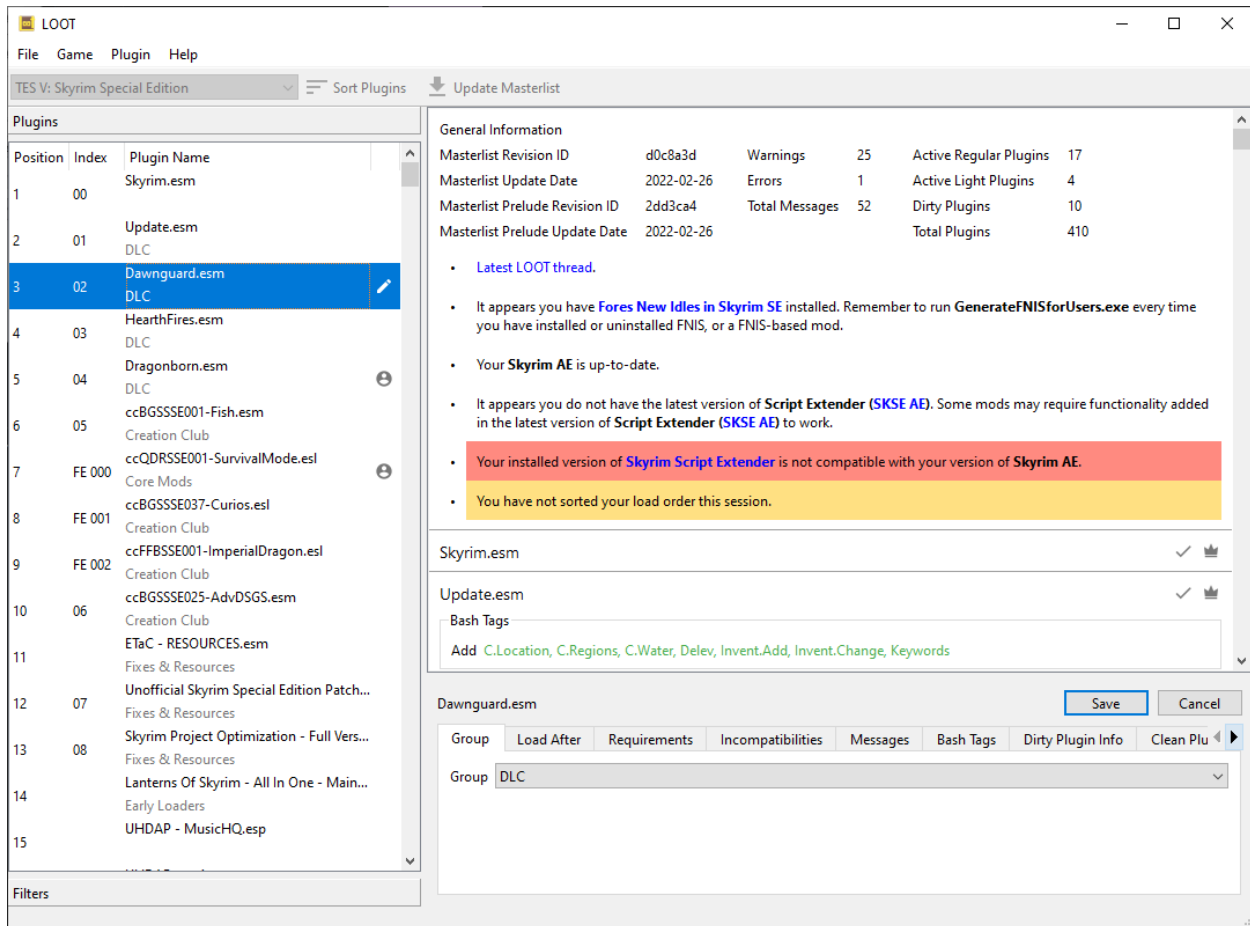

4.1 The Menu Bar

The menu bar consists of the File, Game, Plugin and Help menus. Some menus and menu items are disabled when there is an unapplied sorted load order and while the metadata editor is open. If you're trying to use an option that is faded out, first close the metadata editor, or apply or discard a sorted load order. Additionally, the whole Plugin menu is disabled unless there is a plugin selected in the sidebar.

A few items in the menus are not self-explanatory:

- "Redate Plugins…" is provided so that Skyrim and Skyrim Special Edition modders may set the load order for the Creation Kit. It is only available for Skyrim, and changes the timestamps of the plugins in its Data folder to match their current load order. A side effect of changing the timestamps is that any Steam Workshop mods installed will be re-downloaded.

- "Copy Load Order" copies the displayed list of plugins and the decimal and hexadecimal indices of active plugins to the clipboard. The columns are:

  1. Decimal load order index

  2. Hexadecimal load order index

  3. Hexadecimal light plugin index

  4. Plugin name

- "Copy Content" copies the data displayed in LOOT's cards to the clipboard as YAML-formatted text.

- "Refresh Content" re-scans the installed plugins' headers and regenerates the content LOOT displays. This can be useful if you have made changes to your installed plugins while LOOT was open. Refreshing content will also discard any CRCs that were previously calculated, as they may have changed.

- The "Search Cards…" option allows you to search all the visible text displayed on plugin cards, so the results may be affected by any filters you have active. Searching can optionally be done using case-insensitive Perl-like regular expressions instead of case-insensitive text comparison.

Users running LOOT natively on Linux must have `xclip` installed in order to use the clipboard copy features.

4.2 The Toolbar

The toolbar provides access to LOOT's main features: selecting a game, sorting plugins and updating the masterlist. These features get disabled while the metadata editor is open, so if you're trying to use an option that is faded out, first close the editor.

4.2.1 Game Menu

LOOT's active game can be changed by clicking on it in the header bar, and selecting another game from the menu that is displayed. Games that have no install detected have their menu items disabled.

4.2.2 Masterlist Update & Sorting

The masterlist update process updates the active game's masterlist to the latest revision at the location given by the game's masterlist repository settings.

By *default*, sorting first updates the masterlist. LOOT then calculates a load order for your plugins, using their internal data and any metadata they may have. If a cyclic interaction is detected (eg. A depends on B depends on A), then sorting will fail.

Once LOOT has calculated a load order, it is compared with the current load order. If the current and calculated load orders are identical, LOOT will inform the user that no changes were made via a status bar notification. If the calculated load order contains changes, the plugin cards are sorted into that order and the masterlist update and sorting buttons are replaced with Apply Sorted Load Order and Discard Sorted Load Order buttons, which apply and discard the calculated load order respectively. Changing games is disabled until the calculated load order is applied or discarded.

LOOT is able to sort plugins ghosted by Wrye Bash, and can extract Bash Tags and version numbers from plugin descriptions. Provided that they have the `Filter` Bash Tag present in their description, LOOT can recognise filter patches and so avoid displaying unnecessary error messages for any of their masters that may be missing.

Any errors encountered during sorting or masterlist update will be displayed on the "General Information" card.

Load Order Backups

Before a sorted load order is applied, LOOT saves a backup of the current load order as a `loadorder.bak.0` text file in LOOT's data folder for the current game. Up to three load order backups are retained: `loadorder.bak.0` is the backup from the most recent load order change, `loadorder.bak.1` is the second-most recent backup, and `loadorder.bak.2` is the third-most recent backup.

4.3 Plugin Cards & Sidebar Items

Each plugin is displayed on its own "card", which displays all the information LOOT has for that plugin, and provides access to plugin-specific functionality, including editing its metadata. Each plugin also has an item in the sidebar's Plugins section. The sidebar item contains the plugin's listed position, name and an icon for plugins that have user metadata. It also displays the plugin's in-game load order index if the plugin is active, while light plugins have their light plugin index displayed. Clicking on a plugin's sidebar item will select it, so that the Plugin menu options operate on it. Double-clicking a plugin's sidebar item will jump to its card.

The plugin card's header holds the following information, some of which is only displayed if applicable:

- The "Active Plugin" icon.
- The plugin name.
- The plugin's version number, extracted from its description field.
- The plugin's CRC (Cyclic Redundancy Checksum), which can be used to uniquely identify it. CRCs are only displayed after they have been calculated during conflict filtering or sorting, except the the CRC of the game's main master file, which is never displayed.
- The "Master File" icon.
- The "Light Plugin" icon.
- The "Empty Plugin" icon.
- The "Loads Archive" icon.
- The "Verified clean" icon.
- The "Has User Metadata" icon.

Messages, Bash Tag suggestions and plugin sources are displayed below the plugin card's header.

LOOT's plugin messages are a valuable resource, acting as a means of providing users with information that they might otherwise not obtain. It is important for a stable, healthy game that you act on any messages that require action. If you think a message suggests an unnecessary action, report it to an official LOOT thread. If you encounter a message that is non-conditional, ie. it suggests an action but is still displayed on subsequent runs of LOOT after the action has been carried out, also report it to an official LOOT thread, so that it can be made conditional.

Users generally don't need to do anything with Bash Tag suggestions, as if they're using Wrye Bash it will automatically apply LOOT's suggestions, and if they're not using Wrye Bash then this information doesn't apply. For these reasons, they are hidden by default.

Plugin sources are obtained from location metadata, and don't necessarily reflect where you downloaded the plugin from. If multiple mods provide a plugin with the same filename, that plugin may be listed with links to where each of those mods are hosted.

4.4 Filters

Clicking the Filters section header in the sidebar will replace the sidebar's plugin list with a list of filter toggles that can be applied to hide various combinations of plugins and other content. The available filter toggles are:

Hide version numbers Hides the version numbers displayed in blue next to those plugins that provide them.

Hide CRCs Hides the CRCs displayed in orange next to those plugins that provide them.

Hide Bash Tags Hides all Bash Tag suggestions.

Hide Sources Hides all plugin sources.

Hide notes Hides all plugin messages that have the Note: prefix, or the equivalent text for the language selected in LOOT's settings.

Hide all plugin messages Hides all plugin messages.

Hide inactive plugins Hides all plugins that are inactive.

Hide messageless plugins Hides all plugins that have no visible messages.

Hide Creation Club plugins Hides all plugins that are available through Bethesda's Creation Club.

The filter toggles have their states saved on quitting LOOT, and they are restored when LOOT is next launched. There are also three other filters in the sidebar tab:

Show only conflicting plugins for This filters the plugin cards displayed so that only plugins which conflict with this plugin will be visible. If this plugin loads an archive, other plugins that load archives which may contain conflicting resources are also displayed. Sorting with the conflict filter active will first deactivate it.

Show only plugins in group This filters the plugin cards displayed so that only plugins in the selected group will be visible.

Show only plugins with cards that contain This hides any plugins that don't have the filter input value present in any of the text on their cards.

> The "Use regular expression" checkbox controls whether the input value is interpreted as text or as a regular expression. If ticked and the input value is not a valid regular expression, a tooltip detailing the issue will be displayed and the card content filter will be ignored.

FIVE

EDITING PLUGIN METADATA

LOOT uses metadata to supply plugins with messages and Bash Tag suggestions, and to help it sort plugins that it can't otherwise sort correctly. Users can add to their plugins' metadata through the metadata editor panel, and plugins with user metadata are indicated with a "Has User Metadata" icon.

The editor panel is accessed by selecting a plugin in the sidebar and then clicking the "Edit Metadata" item in the Plugin menu. Only one plugin's metadata can be edited at a time. While the editor panel is open, the plugin sidebar also displays any non-default plugin groups, to aid setting new group memberships. The editor can be resized by grabbing the top of the editor's header and dragging it up or down.

The editor's header displays the name of the plugin being edited, "Save" and "Cancel" buttons, and a row of tabs.

The Group tab's page contains the "Group" dropdown, which sets the group that the plugin belongs to, and is set to the "default" group by default.

> Plugin groups are used to concisely load groups of plugins after others. The dropdown lists all defined groups: to define new groups or edit existing groups, use the Groups Editor.

The other tab pages contain metadata tables, which are detailed below. New rows can be added, and existing user-added rows can be removed, though rows containing metadata from the masterlist cannot. The Load After, Requirements and Incompatibilities tables can have rows added by dragging and dropping plugins from the sidebar into the table area.

Load After This is a list of plugins which, if present, the current plugin must load after, but which are not required. This metadata can be used for resolving specific compatibility issues. Each entry has two fields:

- The filename is the path, relative to the game's Data folder, of the file to be checked for. This field is required. It gives the filenames of installed plugins as autocomplete suggestions.

- The condition is the optional condition string that is used to determine if the file should be checked for. If left blank, the file will always be checked for. Condition strings are a relatively advanced part of LOOT's functionality, and their syntax is covered in the Metadata Syntax documentation.

Requirements This is a list of files that are required by the current plugin for it to function correctly. The current plugin will be loaded after any plugins listed. LOOT will also display an error message if any of the listed files are missing. Any file, not just plugins, can be listed here. Each entry has the same fields as for the load after table and two additional fields:

- The display name is optional, and if specified will be used instead of the filename in any error messages that are displayed if a problem is encountered relating to the file.

- The detail field takes a list of localisable message texts that will be appended to the error message if one is displayed.

Note that listing a plugin's masters as requirements is unnecessary, as LOOT already checks them.

Incompatibilities This is a list of files that are incompatible with the plugin. LOOT will display an error message if any of the listed files are found. Any file, not just plugins, can be listed here, and each entry has the same fields as for the requirements table.

Messages A list of messages that are to be displayed for the plugin in LOOT's report. These have no bearing on a plugin's position in the load order. Each message has three fields:

- The type is fairly self-explanatory, and is used to provide messages of varying severity with appropriate emphasis in LOOT's report.

- The content is the localisable message text.

- The condition is, like for the corresponding file field, used to determine if the message should be displayed. If left blank, the message is displayed.

Bash Tags A list of Bash Tags. These are used by Wrye Bash when generating a Bashed Patch, and are detailed in Wrye Bash's readme. LOOT's metadata includes Bash Tag addition and removal suggestions, and any Bash Tags that came with the plugin are also displayed.

As LOOT can suggest Bash Tags be added or removed, it is possible for the same Tag to appear twice, being suggested for addition and removal. In such cases, removal overrides addition.

Each Bash Tag has three fields:

- The add/remove field determines whether the Tag is to be suggested for addition or removal.

- The Bash Tag field is the actual Bash Tag name. The field gives autocomplete suggestions for Bash Tags that LOOT knows are supported for the current game.

- The condition decides if the Tag is to be suggested or not. It functions as for files and messages.

If a plugin's masters are missing, an error message will be displayed for it. Filter patches are special mods designed for use with a Bashed Patch that do not require all their masters to be present, and so any plugin with the Filter tag applied and missing masters will not cause any errors to be displayed.

Dirty Plugin Info A list of dirty plugin CRCs and related information. Each row has six fields:

- The CRC of the dirty plugin.

- The ITM Count for the dirty plugin.

- The number of Deleted References that the dirty plugin contains.

- The number of Deleted Navmeshes that the dirty plugin contains.

- The name of the Cleaning Utility to use to clean the dirty plugin.

- A localisable detail message text.

LOOT uses the information supplied to construct a warning message for the plugin if it matches any of the given CRCs.

Clean Plugin Info A list of clean plugin CRCs and the utility they were verified clean by. Each row has two fields:

- The CRC of the clean plugin.

- The name of the Cleaning Utility to use to verify that the plugin is clean.

LOOT uses the information supplied to display an icon on the plugin's card if it matches any of the given CRCs.

Locations A list of URLs that the mod to which the plugin belongs can be found at. LOOT displays these as source hyperlinks on the plugin's card. Each location has two fields:

- The URL at which the plugin's parent mod can be found.

- The Name you wish to give the URL. If given, LOOT uses this as the text displayed for the hyperlink on the plugin's card.

EDITING PLUGIN GROUPS
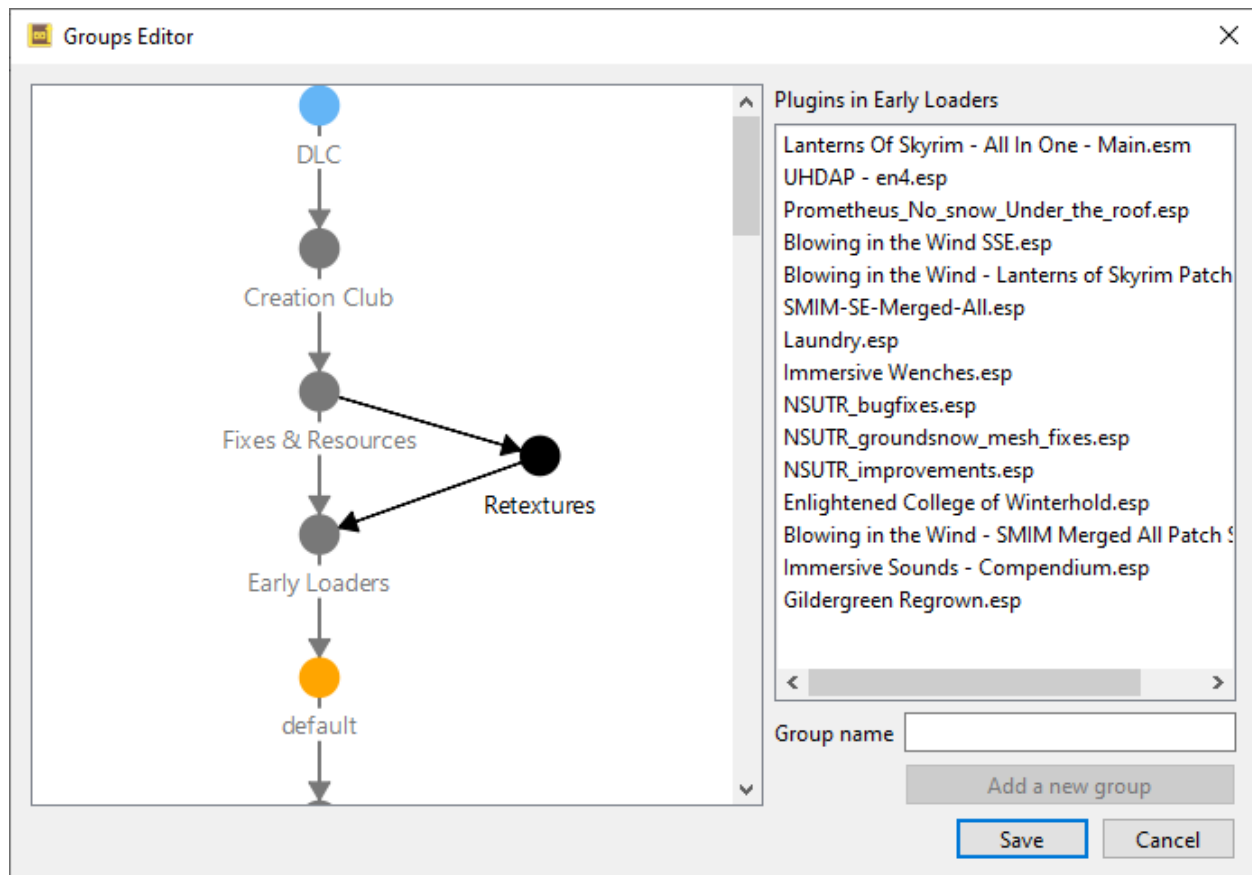

6.1 What Are Plugin Groups?

LOOT assigns each plugin to one plugin group, with plugins belonging to the `default` group by default. Each group has a name and a list of zero or more other groups it loads after. In this way, it's possible to concisely load groups of plugins after other groups of plugins.

Group load order is transitive, i.e. given three groups A, B and C, if C loads after B and B loads after A, then plugins in group C will load after plugins in group A even if no plugins in group B are installed.

6.2 The Groups Editor

A group must be defined before plugins can belong to it, and defining and editing groups is done in the Groups Editor, which can be accessed through the Game menu.

The groups editor consists of an interactive graph displaying all defined groups and their load after metadata, and a sidebar containing input for defining new groups and a list of plugins in the currently selected group.

- Groups are displayed as circular nodes in the graph, labelled with their names.
  - Groups that load after no other groups are displayed in blue.
  - Groups that no other groups load after are displayed in green.
  - The `default` group is displayed in orange.
- Load after metadata is displayed as lines (edges/vertices) between nodes, pointing from the earlier group to the later group.
- Metadata defined in the masterlist is greyed out, while user-defined metadata is not.

If any group definitions reference another group that does not exist, the groups editor will create the missing group as user metadata. This is to help when there is user metadata that says the user-defined group B must load after the masterlist-defined group A, but then group A is removed in a masterlist update. In that case, just open up the groups editor and link group A back into the graph as it was before.

New load after metadata can be added by double-clicking on one group node and dragging a line from it to any other group nodes.

Clicking on a group will cause any installed plugins in that group to be listed in the sidebar.

Right-clicking a load after metadata line will remove that load after metadata, and right-clicking a group will remove it. Masterlist metadata cannot be removed. A group cannot be removed if any installed plugins belong to it.

The graph can be zoomed in and out of using your mouse's scroll wheel. Left-clicking and dragging an empty space will move the whole graph, while left-clicking and dragging a node will move it.

6.3 Rules For Using Groups

The groups editor enforces a few rules:

- A group cannot load after itself.
- A group cannot load after another group if the other group does not exist.
- It's not possible to delete groups that are defined in the masterlist.
- It's not possible to remove 'load after' entries from a group if they were defined in the masterlist.

Another rule that the groups editor cannot enforce is that **group metadata must not introduce cycles**. A simple example of cyclic groups is where group B loads after group A, and group A loads after group B.

A more complex example involving other types of metadata is where

- `A.esp` is in the `early` group
- `B.esp` is in the `mid` group
- `C.esp` is in the `late` group
- `A.esp` has `C.esp` as a master
- The `late` group loads after the `mid` group, which loads after the `early` group.

This will cause a cyclic interaction error when sorting, because the groups say that the load order should be

1. `A.esp`
2. `B.esp`
3. `C.esp`

but `A.esp` must load after `C.esp` to satisfy its dependency.

6.4 Cycle Avoidance

Groups must not introduce cycles, but in practice this can be quite hard to ensure. LOOT helps by avoiding cycles that have an "obvious" solution.

- If group membership contradicts where a plugin's masters, master flag, load after or requirement metadata say that plugin should load relative to another plugin, the plugins' groups' relationship will not be enforced. For example, if:

    - `dependent.esp` belongs to group `early`
    - `master.esp` belongs to group `late`
    - `master.esp` is a master of `dependent.esp`
    - The `late` group loads after the `early` group.

    `dependent.esp` must load after `master.esp` due to the former being a master of the latter, but their groups suggest that `master.esp` must load after `dependent.esp`, so the group metadata is ignored for that pair of plugins.

- In addition, if one of a pair of plugins with contradictory groups is the `default` group, that plugin will also have its group metadata ignored for all plugins in all groups that load between `default` and the other plugin's group.

    For example, if:

    - `A.esp` is in the `default` group
    - `B.esp` is in the `mid` group
    - `C.esp` is in the `late` group
    - `A.esp` has `C.esp` as a master
    - The `late` group loads after the `mid` group, which loads after the `default` group.

    This will not cause a cycle, as:

    - `A.esp`'s group is ignored for `C.esp` as their groups contradict `C.esp` being a master of `A.esp`
    - `A.esp`'s group is ignored for `B.esp` as `B.esp` is in the `mid` group, which loads between `default` and `late`.

    The sorted load order is therefore:

    1. `B.esp`
    2. `C.esp`
    3. `A.esp`

    This is very similar to the example given in the previous section which *did* cause a cycle: the only difference is that the `early` group is now `default`.

EDITING SETTINGS
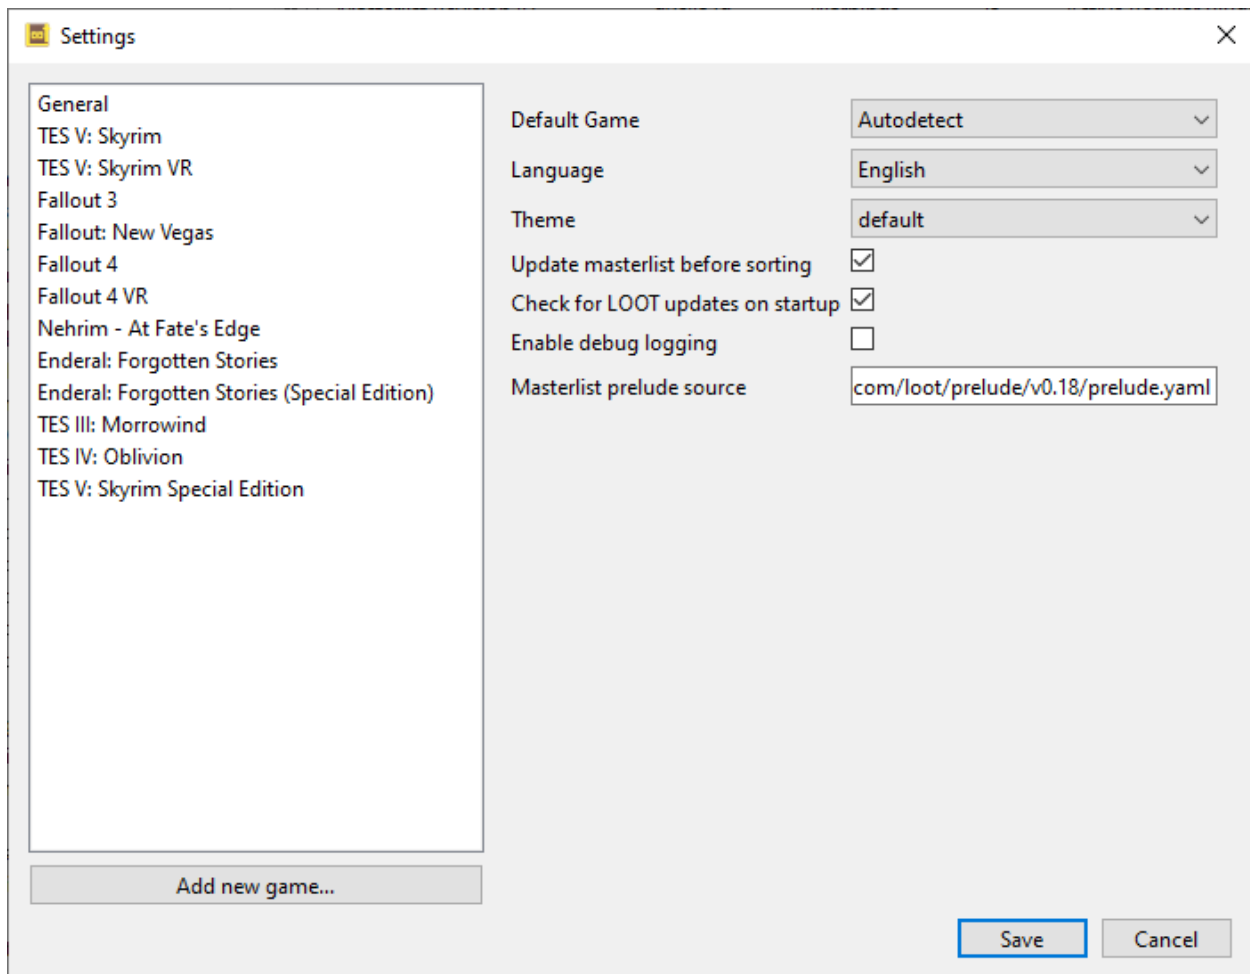

LOOT's settings may be accessed through the File menu.

7.1 General Settings

Default Game If set to something other than Autodetect, this overrides game autodetection. If the game specified is not detected, LOOT falls back to autodetection.

Language Controls the language LOOT uses. Any plugin messages that do not have translations in the selected language will be displayed in English, if available, or in their available language otherwise.

Theme Controls the theme LOOT loads. If the specified theme is not found, LOOT falls back to the default theme.

Update masterlist before sorting If checked, LOOT will update its masterlist, should an update be available, before sorting plugins.

Check for LOOT updates on startup If checked, LOOT will check for updates on startup and display a general message if an update is available.

Enable Debug Logging If enabled, writes debug output to `%LOCALAPPDATA%\LOOT\LOOTDebugLog.txt`. Debug logging can have a noticeable impact on performance, so it is off by default.

Masterlist prelude source The URL of a masterlist prelude file that LOOT uses to update its local copy of the masterlist prelude.

7.2 Game Settings

LOOT's game-specific settings can be customised by selecting a game in the sidebar. New game profiles can be added, making it easy to use LOOT across multiple copies of a game, including total conversion mods. LOOT ships with settings for the "Nehrim - At Fate's Edge" total conversion mod as an example. Game profiles can also be deleted, though the active game cannot have its profile deleted, and LOOT will recreate the profiles for the base games it supports (Morrowind, Oblivion, Skyrim, Skyrim Special Edition, Skyrim VR, Fallout 3, Fallout: New Vegas, Fallout 4 and Fallout 4 VR) when it is next run.

Name The name of the game, or another identifying text, that is displayed in menus and the LOOT's title bar.

Base Game Type Every game LOOT runs for must use the plugin file format and load order system of one of the following games:

- TES III: Morrowind
- TES IV: Oblivion
- TES V: Skyrim
- TES V: Skyrim Special Edition
- TES V: Skyrim VR
- Fallout 3
- Fallout: New Vegas
- Fallout 4
- Fallout 4 VR

LOOT Folder The sub-folder which LOOT uses to store the game's files in. Each game must be given a unique sub-folder.

Master File The game's main master file. This is checked for when detecting if the game is installed.

Minimum Header Version LOOT will display a warning message for any plugin that has a header version less than this value. Note that this version is different from any version that LOOT may be able to read from the plugin's description field.

Masterlist Source The URL of a masterlist file that LOOT uses to update its local copy of the masterlist.

Install Path The path to the game's folder, in which the Data folder lies. Either this or a registry key must be supplied.

Install Path Registry Keys The registry keys that may contain the install path of the game. These are used to obtain the install path if LOOT has no previous record of the game's install path, or LOOT's stored install path is invalid. If a key does not specify its root, it is assumed to be `HKEY_LOCAL_MACHINE`. The other recognised roots are `HKEY_CLASSES_ROOT`, `HKEY_CURRENT_CONFIG`, `HKEY_CURRENT_USER` and `HKEY_USERS`.

Multiple keys can be provided, one per line, and are checked in the order they are given, stopping at the first key that exists and stores a valid install path.

Local AppData Path The path to the game's local application data directory, which is usually in `%LOCALAPPDATA%` and for most games contains `plugins.txt`. If left empty, LOOT will derive the path to use from the base game type.

HOW LOOT SORTS PLUGINS

LOOT sorts plugins according to a set of rules that dictate how two plugins load relative to one another. An example rule could be "Cutting Room Floor.esp must load after Skyrim.esm". LOOT derives rules from various data sources: one source for the example rule could be the plugins' master flag fields: Skyrim.esm has its master flag set, and Cutting Room Floor.esp does not. Another source could be the plugins' master fields: Cutting Room Floor.esp has Skyrim.esm as a master.

LOOT represents these rules in a graph, where each point (or *vertex*) represents a plugin, and each line (or *edge*) joins two points, going from the plugin that loads earlier to the plugin that loads later. Visualised, a simple set of rules on a small load order looks like this:
It may seem like there are a lot of edges in that image, but a more realistic load order graph could contain ~ 20 times as many vertices and ~ 1000 times as many edges.

8.1 Building The Plugin Graph

The plugin graph is constructed in a specific way, partly to ensure that sorting is stable (i.e. it doesn't give you different results every time).

8.1.1 Hard Rules

First the 'hard' rules, which **must** be followed, are applied. For each plugin, going in lexicographical (like alphabetical, but extended to cover digits and other symbols) order:

1. If the plugin has its master flag set, edges are added going from it to every other plugin that does not have its master flag set.

2. If the plugin has any masters, edges are added going from each of them to the plugin.

3. If the plugin has any requirements metadata, edges are added going from each required plugin to the plugin.

4. If the plugin has any "load after" metadata, edges are added going from each "load after" plugin to the plugin.

Some games, like the various versions of Skyrim and Fallout 4, hardcode the positions of some plugins. To take this into account when sorting, LOOT adds hard rules for them. For each plugin that has a hardcoded position, going from the first/earliest hardcoded position to the last/latest position, an edge is added going from that plugin to every other plugin, unless that other plugin is hardcoded to load in an earlier position.

In the example graph image above, all the edges apart from the one between `Cutting Room Floor.esp` and `Bashed Patch, 0.esp` could be due to hard rules:

- `Skyrim.esm` is a master of all the other plugins.

- `Skyrim.esm`, `Update.esm`, `Dawnguard.esm`, `HearthFires.esm` and `Dragonborn.esm` are all hardcoded to load in that order.

- All of the `*.esm` plugins have their master flag set, and both of the `*.esp` plugins do not have it set.

8.1.2 Group Rules

At this point, all hard rules have been applied. Group rules are applied next. This part has the most complex logic, though the ideas behind it are relatively simple. To summarise, each plugin belongs to a group, and groups can load after other groups. If group C loads after group B, and group B loads after group A, this means that all the plugins in group C load after all the plugins in groups A and B.

However, group rules are 'soft' rules, so can be ignored to avoid cyclic interactions. A cyclic interaction occurs when following the rules results in a load order that loops back on itself, e.g. the two rules "B loads after A" and "A loads after B" are cyclic. If one of those rules is a hard rule and the other is a group rule, LOOT will ignore the group rule to avoid the cycle. There are also a few other cases in which LOOT can avoid a cycle involving group rules, which are detailed in *Editing Plugin Groups*.

It's not always possible for LOOT to choose which plugin's group metadata to ignore, and it's often impractical to know all of the hard and group rules that a plugin may be involved in, so plugin grouping is a relatively common source of cyclic interaction errors.

Anyway, after applying all the hard rules, LOOT applies all the group rules it can for each plugin in lexicographical order, avoiding cycles by ignoring those groups that it needs to.

In the example graph image above, the edge from `Cutting Room Floor.esp` to `Bashed Patch, 0.esp` is due to a group rule, because `Bashed Patch, 0.esp` is in a group that loads after `Cutting Room Floor.esp`'s group.

8.1.3 Overlap Rules

Overlap rules are applied after group rules, and have lower priority. They are also soft rules, and are ignored as necessary to avoid cyclic interactions. Two plugins are said to overlap if they both contain a copy of a record. They don't necessarily have to make any edits to the record for there to be an overlap, it just needs to be in both plugins.

If two plugins overlap, and one overrides more records than the other, then the rule is to load the plugin that overrides fewer records after the other plugin. This is done to help maximise the effect that each plugin has. If the two plugins override the same number of records, the overlap is ignored and no rule exists.

Each pair of plugins is checked in lexicographical order for overlap, and all overlap rules are applied, unless adding a rule would cause a cycle.

Morrowind plugins that have one or more masters that are not installed have their total record count used in place of their override record count, as unlike for other games, a Morrowind plugin's override records can only be counted by comparing the plugin against its masters.

8.1.4 Tie Breaks

At this point LOOT might be ready to calculate a load order from the graph, but to ensure a stable sort, it needs to make sure there is only one possible path through the graph that visits every plugin. For example, going back to the image above, if there was no edge between `Cutting Room Floor.esp` and `Bashed Patch, 0.esp`, the load order could be:

```
Skyrim.esm
...
Cutting Room Floor.esp
Bashed Patch, 0.esp
```

or it could be:

```
Skyrim.esm
...
Bashed Patch, 0.esp
Cutting Room Floor.esp
```

as there would be no way to decide which plugin to put last. This could mean that LOOT's sorting would be unstable, picking a different result each time, which isn't good.

To avoid this, LOOT loops through each pair of plugins (again, in lexicographical order) and checks if there is a path (i.e. a series of edges added by rules) going from one to the other. If there is no path, LOOT adds a tie-break edge.

The direction of the tie-break edge, i.e. which plugin loads after the other, is decided by a few pieces of data:

1. If one plugin has a position defined in the current load order and the other plugin does not (e.g. it is newly-installed), then the latter loads after the former.

2. If both plugins have positions in the current load order, they retain their existing relative order, i.e. the plugin that currently loads later still loads later.

3. If neither plugin has a position defined in the current load order, their lowercased filenames are lexicographically compared, ignoring their file extensions. The plugin with the filename that sorts later loads after the other plugin. For example, `A.esp` and `B.esp` would load in that order.

It's possible for that logic to be unable to decide how to break the tie: in that case, no tie-break edge is added, as another edge added between another pair may also break the unresolved tie. Such cases are highly unlikely to occur though, and pretty much have to be intentionally created.

8.2 Topological Sort

At this point the plugin graph is now complete. Before calculating a load order from the graph, the graph is checked for cycles: if one is found, a sorting error occurs. If no cycles are found, then the graph is topologically sorted, which produces a path through the graph's vertices that visits each vertex exactly once. This path is the calculated load order.

The topological sort of the example graph is:

```
Skyrim.esm
Update.esm
Dawnguard.esm
HearthFires.esm
Dragonborn.esm
Cutting Room Floor.esp
Bashed Patch, 0.esp
```

THEMES

Themes can be selected in LOOT's settings dialog. Two themes are provided with LOOT: the default theme and a dark theme.

Additional themes may be installed in the `resources/themes` directory, relative to `LOOT.exe`. A theme can have two files:

- `<theme name>.theme.qss` is a Qt Style Sheet file that is required to be present for LOOT to find the theme.

- `<theme name>.palette.toml` is a TOML file that can optionally be provided alongside the QSS file to define the theme's color scheme.

9.1 Palette TOML

If provided, a palette TOML file allows the following color roles to be defined for the `active`, `inactive` and `disabled` color groups:

- window

- windowText

- base

- alternateBase

- toolTipBase

- toolTipText

- placeholderText

- text

- button

- buttonText

- brightText

- light

- midlight

- dark

- mid

- highlight

- highlightedText

- link

- linkVisited

All color roles take a string value that can be in any of the formats documented here.

All of the color groups and roles are optional, but at least the active group's button and window colors should be provided for best results.

9.1.1 Example

```
[active]
button = "#424242"
window = "#212121"
windowText = "#E0E0E0"
light = "#303030"
dark = "#757575"
mid = "#595959"
text = "#FFF"
brightText = "#595959"
base = "#303030"
placeholderText = "#B3FFFFFF"
link = "#2979FF"

[disabled]
windowText = "#4DE0E0E0"
text = "#4DFFFFFF"
brightText = "#4D595959"
placeholderText = "#4DFFFFFF"
link = "#4D2979FF"
```

CONTRIBUTING & SUPPORT

LOOT is very much a community project, and contributions from its users are very welcome, whether they be metadata, translations, code or anything else. The best way to contribute is to make changes yourself at GitHub! It's the fastest way to get changes you want applied, and you'll get your name automatically immortalised in our credits.

If you encounter an issue with LOOT, check the Frequently Asked Questions page in case a solution is available there. Otherwise, general discussion and support takes place in LOOT's official forum thread or on our Discord server, which are also linked to on LOOT's homepage.

If you want to submit metadata, the easiest way to do so is to add the metadata to your own LOOT install, then use the Copy Metadata feature to easily get it in a form that you can then edit into a masterlist on GitHub or post in the official forum thread.

Information on dirty plugins is very welcome in the form of Quick Auto Clean reports (QAC) from xEdit. In addition to the QAC report we also require a link to a plugins source, so we can always verify and reevaluate the plugin at a later date. It also would be ideal if the user would check if the masterlist already includes information on the plugin in question.

In order to guarantee the safety of our users, links to mods must follow these guidelines:

- The link should refer to an official/canonical/supported source, as opposed to unverified uploads.

- Whenever possible, the url should use `https` instead of `http`.

- The plugin in question mustn't be behind a paywall of any sort.

- The LOOT Team reserves the right to reject URLs to websites that contain illegal content.

CREDITS

LOOT is developed on GitHub, and a full list of GitHub contributors may be found here.

LOOT's masterlists have gotten many additions, improvements, refinements and translations over the years, and so credit is due to the very large number of people and sources (particularly BOSS's masterlists) who have contributed to them.

In addition, the following are credited with application-related support:

- Original icon: jonwd7

- Translations:

    - Bulgarian: Georgi Georgiev

    - Chinese (Simplified): bluesky404, silentdark

    - Czech: ThePotatoChronicler

    - Danish: Freso

    - Finnish: 3ventic

    - French: Kaos, cpasmoi, Sita, Zamix

    - German: lpradel, DaCoolX, Infernio, pStyl3

    - Italian: Griam, nicola89b, albie

    - Japanese: kuroko, tktk11, Menchi

    - Korean: SteamB23, sean-kang

    - Polish: Łukasz Niemczyk, Yoosk

    - Portuguese: ironmagician

    - Portuguese (Brazil): Kassane, zDasF1xer

    - Russian: Tokc.D.K., Kerber, IllusiveMan196

    - Spanish: Sharlikran, Artaios, Mr. Robo, Allen1351 (Ale)

    - Swedish: Mikael Hiort af Ornäs, simoneddeland, ddbb07

    - Ukrainian: IllusiveMan196
- Testing: Too many to list, thank you all!

LOOT uses the Boost, cpptoml, and spdlog libraries, and the Qt framework.

VERSION HISTORY

Only application history is recorded here. A full history of masterlist changes may be viewed by browsing the GitHub repositories.

12.1 0.18.0 - 2022-03-07

12.1.1 Added

- Support for games installed through the Microsoft Store or Xbox apps. Older versions of the apps install games with very restricted permissions that are difficult to change, and which cause problems when modding. Newer versions install games with much less restricted permissions, but there are still some issues that are not present in versions of the games installed from other sources like Steam or GOG. See *Microsoft Store Compatibility* for more information.

- The `--game-path` CLI parameter can be used in conjunction with `--game` to replace the identified game's install path in LOOT's settings.

- LOOT will now display a warning message in a plugin's card if it makes any Bash Tag suggestions that would be overridden by the content of an installed BashTags file for that plugin.

- Location metadata is now displayed at the bottom of plugin cards.

- It's now possible to search cards using regular expressions by ticking the "Use regular expression" checkbox in the search dialog.

- It's now possible to filter plugin content using a regular expression by ticking the "Use regular expression" checkbox below the content filter input in the sidebar.

- A "Hide Sources" filter has been added to control the display of location metadata. It is enabled by default.

- A "Hide Creation Club plugins" filter has been added to hide any installed Creation Club plugins' cards for games that support the Creation Club. It is disabled by default.

- The sidebar plugins list now includes a column that contains the plugin's position in the load order.

- The File menu has a new "Backup LOOT Data" action that creates a timestamped zip file in `%LOCALAPPDATA%\`
  `LOOT\backups\` that contains the contents of `%LOCALAPPDATA%\LOOT`, excluding the `backups` directory, any `.git` directories and the `LOOTDebugLog.txt` file.

- LOOT will now automatically backup its existing data when a new version of LOOT is run for the first time.

- The Game menu has a new "Fix Ambiguous Load Order" action. It starts off disabled, but LOOT will enable it and display a warning dialog if it detects an ambiguous load order (e.g. when you've just installed a new plugin and not yet given it an explicit load order position). The menu action saves the load order that is seen by LOOT so that there's no room for ambiguity.

- The Help menu has a new "Join Discord Server" action that opens the LOOT Discord server's invitation link in your default web browser.

- It's now possible to configure a game's minimum header version using the new "Minimum Header Version" field for games in the settings dialog.

- It's now possible to view and edit multilingual message content in the plugin metadata editor. The editor tables display the text selected for the current language, and double-clicking on a table cell holding message content will open a dialog with an editable table containing the multilingual content.

- A "Detail" column has been added to the plugin metadata editor's Requirements, Incompatibilities and Dirty Plugin Info tabs to represent the metadata's detail field.

12.1.2 Fixed

- LOOT would sometimes display a blank white window when run.

- LOOT's uninstaller did not remove the LOOT game folders for Skyrim Special Edition, Skyrim VR, Fallout 4 VR, Nehrim, Enderal or Enderal Special Edition when asked to remove user data.

- When sorting failed LOOT would display an error message giving a path to a file that may be read-only, but the file path was always wrong for Morrowind and was also wrong if using a non-default local AppData path for the current game.

- Two versions that only differ by the presence and absence of pre-release identifiers were not correctly compared according to Semantic Versioning, which states that 1.0.0-alpha is less than 1.0.0. Via libloot.

12.1.3 Changed

- Official LOOT releases now require the MSVC 2019 redistributable, which LOOT's installer will automatically download and install if necessary. In additon, a 64-bit build is available that requires a 64-bit version of Windows 10 (1809) or later, and this build is recommended for everyone with a PC that meets that requirement.

- The user interface has been completely replaced by a new implementation using Qt. The new user interface is more efficient, responsive and maintainable, and has a substantially different look and feel. In additon, it introduces the following changes to LOOT's functionality:

  - The toolbar overflow menu items have been moved into File, Game and Help menus in the new menu bar.

  - Plugin cards no longer have menus: instead there's a Plugin menu in the menu bar that contains the same actions, which operate on the plugin that's currently selected in the sidebar.

  - Notifications are now displayed in the status bar rather than in a pop-up toast widget.

  - It's no longer possible to select card text to copy it to the clipboard, so instead there's a "Copy Card Content" action in the Plugin menu.

  - Clicking on a plugin in the sidebar selects it, and double-clicking scrolls to its card, instead of single-clicking scrolling to its card and double-clicking opening it in the metadata editor.

  - The game selection dropdown now only lists games that LOOT detects are installed, instead of displaying all configured games and disabling those that aren't detected.

  - Markdown text is now interpreted as CommonMark instead of GitHub Flavored Markdown.

  - Themes have been reimplemented, see the *Themes* section for more information about the new theme file formats.

- Updating the masterlist prelude and masterlists no longer uses Git. This massively speeds up fetching the prelude or masterlist for the first time.

– Each pair of repository URL and branch settings has been replaced by a source setting that accepts a local path or HTTP(S) URL of a metadata file.

LOOT will migrate existing repository URL and branch settings for any repository on GitHub. It will also migrate local repository paths so long as the path is to a Git repository with the relevant metadata file in the repository working copy's root directory. LOOT will display a warning if it cannot migrate existing settings.

– The revision ID displayed by LOOT is now the Git blob hash of the file instead of the Git commit hash that the file is from. When calculating the hash, LOOT first replaces all CRLF line endings with LF, which may cause it to produce different blob hash values from Git when using an unofficial masterlist.

– The date displayed by LOOT is now the date on which the masterlist was last updated, not the date of the Git commit that it was updated to.

- The First Time Tips dialog is now displayed before loading the game it's running for, and no longer runs if auto-sort is enabled.

- The "Open Debug Log Location" menu action has been renamed to "Open LOOT Data Folder".

- The "Local Data Path" game setting has been renamed to "Local AppData Path".

- Bash Tag suggestions are now hidden by default.

- The Active Plugins count in the General Information card has been split into Active Regular Plugins and Active Light Plugins for games that support light plugins, as they have separate limits.

- Content is now copied as Markdown that is equivalent to what is displayed, instead of as raw JSON data.

- Plugin metadata is now copied as YAML instead of JSON, using the same format as LOOT uses when saving user metadata.

- Bash Tags are now displayed below messages because they're generally of less interest to users, and they're grouped together to make it more obvious what they are.

- The Groups Editor now lays out groups vertically rather than horizontally.

- LOOT's game folders have been moved into `%LOCALAPPDATA%\LOOT\games` to differentiate them from the other files and folders in `%LOCALAPPDATA%\LOOT`. LOOT will migrate each existing game folder to the new location when it is run for that game.

- LOOT now supports v0.18 of its metadata syntax.

- Updated the Bulgarian translation.

- Updated the Czech translation.

- Updated the German translation.

- Updated the Italian translation.

- Updated the Spanish translation.

- Updated the Russian translation.

- Updated the Ukrainian translation.

- Updated Boost to v1.77.0.

- Updated libloot to v0.18.0.

12.1.4 Removed

- LOOT will no longer silently set an unchanged load order when sorting, which it previously did for Skyrim, Skyrim Special Edition, Skyrim VR, Fallout 4 and Fallout 4 VR.

- The "Jump To General Information" toolbar button.

- The Chromium Embedded Framework dependency.

- The nlohmann/json dependency.

- All JavaScript dependencies.

12.2 0.17.0 - 2021-12-19

12.2.1 Added

- Support for multiple registry keys per game.

- Support for registry keys in the 64-bit registry view.

- Steam and GOG registry keys for all supported games on each platform.

- Support for the masterlist prelude, a metadata file that is used to supply common metadata to all masterlists.

- The ability to filter plugins by their group.

- The `detail` message string is now appended when generating requirement and incompatibility messages.

- A Ukrainian translation by IllusiveMan196.

12.2.2 Fixed

- LOOT will only attempt to start for the preferred game if it is installed, and will otherwise fall back to the first listed installed game.

- Autocomplete error translations were unused.

- Some groups editor text was untranslatable.

12.2.3 Changed

- The groups editor now has a "drawing mode" toggle button. Edges can only be added in drawing mode, and nodes can only be moved around outside of drawing mode.

- The Skyrim VR and Fallout VR games now use new `skyrimvr` and `falloutvr` masterlist repositories. The new repositories are independent from the `skyrimse` and `fallout4` repositories that were previously used.

- LOOT's installer now downloads the latest MSVC 2015/2017/2019 redistributable if it is not already installed, or if it is older than 14.15.26706.

- Sorting now checks for cycles before adding overlap edges, so that any cycles are caught before the slowest steps in the sorting process. Via libloot.

- Masterlist update no longer supports rolling back through revisions until a revision that can be successfully loaded is found. Via libloot.

- Updated libloot to v0.17.1.

- Updated nlohmann/json to v0.17.0.

- Updated spdlog to v1.9.2.

- Updated JS package dependencies.

- Updated to Inno Setup v6.2.0.

- Updated the German translation.

- Updated the Italian translation.

- Updated the Korean translation.

- Updated the Bulgarian translation.

- Updated the Russian translation.

- Updated the Spanish translation.

12.3 0.16.1 - 2021-05-09

12.3.1 Added

- Support for Enderal: Forgotten Stories and Enderal: Forgotten Stories (Special Edition). LOOT's default configuration includes the necessary configuration for these games: if upgrading from an older version of LOOT, remove any existing `settings.toml` to have LOOT generate its default configuration.

- It is now possible to set the name of a game's folder within `%LOCALAPPDATA%` using the `local_folder` config property in LOOT's `settings.toml` file. It cannot be used at the same time as the `local_path` property.

- A Bulgarian translation by RacerBG.

- An Italian translation by Griam, nicola89b and albie.

- A Portuguese translation by ironmagician.

12.3.2 Fixed

- The "Hide inactive plugins" and "Hide messageless plugins" filters did not affect LOOT's search, which would count hidden plugins in its results and attempt to navigate between them.

- Invalid plugins were not hidden in some cases.

- Linux builds did not correctly handle case-insensitivity of plugin names during sorting on filesystems with case folding enabled. Via libloot.

12.3.3 Changed

- The settings dialog has been redesigned to better accommodate a longer list of supported games and give more space to their configuration inputs.

- If the selected game cannot be found, the error message displayed by LOOT now suggests running the game's launcher as this is a very common fix.

- If LOOT fails to read a game's settings from `settings.toml`, it will now log the error in its debug log.

- Themes are now sorted lexicographically in their selection dropdown in LOOT's settings.

- Most occurances of the terms "Light Master" or "Light Master File" have been replaced by "Light Plugin" to reflect that whether or not a plugin is light is independent of whether it is a master.

- The installer once again downloads the MSVC redistributable if it is not already installed, as it did before LOOT v0.16.0.

- Updated the Brazilian Portuguese translation.

- Updated the Chinese translation.

- Updated the German translation.

- Updated Boost to 1.72.0.

- Updated CEF to v90.6.5+g7a604aa+chromium-90.0.4430.93.

- Updated libloot to 0.16.3.

- Updated spdlog to 1.8.5.

- Updated JS package dependencies.

12.3.4 Removed

- The "do not clean" filter, as messages using that filter no longer exist in recent versions of any of LOOT's masterlists.

12.4 0.16.0 - 2020-08-22

12.4.1 Fixed

- LOOT did not display generated messages (such as errors about missing masters) for plugins that had no metadata after evaluating conditions.

- Existing messages were not displayed in the plugin metadata editor.

- Game data was loaded twice on startup.

- Changing LOOT's theme now stores `theme.css` in `%LOCALAPPDATA%\LOOT` to avoid permissions issues due to User Account Control (UAC).

- When getting metadata for a plugin, LOOT would prefer masterlist metadata over userlist metadata if they conflicted, which was the opposite of the intended behaviour.

- Clearing user groups metadata using the "Clear All User Metadata" menu option did not remove them from the UI.

- LOOT now correctly identifies the BSAs that a Skyrim SE or Skyrim VR loads. This assumes that Skyrim VR plugins load BSAs in the same way as Skyrim SE. Previously LOOT would use the same rules as the Fallout games for Skyrim SE or VR, which was incorrect. Via libloot.

12.4.2 Changed

- Missing groups are now added as userlist groups when the groups editor is opened, to make it easier to recover from sorting errors due to missing groups.

- The "has user metadata" icon is now displayed on each tab of the metadata editor that contains user metadata, apart from the "Main" tab.

- When getting metadata for a plugin, metadata from a plugin's specific metadata object is preferred over metadata from any matching regex entries, and earlier regex entries now take precedence over later regex entries (as listed in the masterlist or userlist). Via libloot.

- CRC calculations in metadata conditions are now much faster for larger files. Via libloot.

- Directory paths are now handled more gracefully when encountered by `checksum()`, `version()` and `product_version()` conditions. Via libloot.

- When comparing metadata objects, all their fields are now compared. This means that objects that were previously treated as equal but had unequal fields that were not taken into account are now treated as unequal. For example, two requirements with the same filename but different conditions will now both appear in the metadata editor. Via libloot.

- When loading plugins, LOOT identifies their corresponding archive files (`*.bsa` or `*.ba2`, depending on the game) more quickly. Via libloot.

- The order of collection elements in plugin metadata objects is now preserved. Via libloot.

- The installer now bundles the MSVC redistributable instead of downloading it if required, as the plugin providing the download functionality is no longer available.

- Updated CEF to v84.4.1+gfdc7504+chromium-84.0.4147.105.

- Updated spdlog to v1.7.0.

- Updated libloot to v0.16.1.

- Updated nlohmann/json to v3.9.1.

- Updated JS package dependencies.

12.4.3 Removed

- It's no longer possible to disable plugin metadata, though doing so has never had any effect.

12.5 0.15.1 - 2019-12-10

12.5.1 Fixed

- The "Open Groups Editor" menu item could not be translated (this wasn't properly fixed in v0.15.0).

- The changelog for the 0.15.0 release was missing.

12.6 0.15.0 - 2019-12-10

12.6.1 Fixed

- The "Open Groups Editor" menu item could not be translated.

- The "Open Groups Editor" menu item was not disabled if game loading failed.

- LOOT would fail to select a game if the preferred game was not installed but another game was.

- LOOT was unable to extract versions from plugin descriptions containing `version:` followed by whitespace and one or more digits. Via libloot.

- LOOT did not error if masterlist metadata defined a group that loaded after another group that was not defined in the masterlist, but which was defined in user metadata. This was unintentional, and now all groups mentioned in masterlist metadata must now be defined in the masterlist. Via libloot.

12.6.2 Changed

- The GUI is now better at handling initialisation failures.

- The "Add New Row" icon button in editable tables has been replaced by text-only button, and its implementation tweaked to reduce the chance of breakage.

- The range of FormIDs that are recognised as valid in light masters has been extended for Fallout 4 plugins, from between `0x800` and `0xFFF` inclusive to between `0x001` and `0xFFF` inclusive, to reflect the extended range supported by Fallout 4 v1.10.162.0.0. The valid range for Skyrim Special Edition plugins is unchanged. Via libloot.

- LOOT now supports v0.15 of the metadata syntax. Via libloot.

- Updated the German translation.

- Updated libloot to v0.15.1.

- Updated nlohmann/json to v3.7.3.

- Updated spdlog to v1.4.2.

12.6.3 Removed

- The ability to specify the HTML file URL to load as a CLI parameter, as it could cause users to see a white screen on launch if they ran LOOT with an unrecognised CLI parameter.

12.7 0.14.6 - 2019-09-28

12.7.1 Added

- Support for TES III: Morrowind.

- Support for selecting a theme in LOOT's settings dialog, making it easier to use the dark theme that LOOT has bundled since v0.9.2.

- Support for specifying a font family to use per language, so that different languages can use different fonts. The default font families are `Roboto, Noto, sans-serif`. Korean prefixes this with Malgun Gothic, Chinese with Microsoft Yahei, and Japanese with Meiryo. Font families are specified in the new `languages` table in LOOT's `settings.toml`.

12.7.2 Fixed

- Regular expressions in condition strings are now prefixed with `^` and suffixed with `$` before evaluation to ensure that only exact matches to the given expression are found. Via libloot.

- LOOT's taskbar icon would sometimes be displayed with a black bar down its left side.

12.7.3 Changed

- The languages that LOOT supports are no longer hardcoded: the list is now read from the new `languages` table in LOOT's `settings.toml`. A supported language is expected to have a Gettext MO file at `resources/l10n/<ISO code>/LC_MESSAGES/loot.mo`, relative to `LOOT.exe`.

- Updated libloot to v0.14.10.

- Updated nlohmann/json to v3.7.0.

- Updated JS package dependencies.

12.8 0.14.5 - 2019-07-04

12.8.1 Fixed

- Filename comparisons implemented case-insensitivity incorrectly, which caused LOOT to not properly recognise some files, depending on the characters in their filename and the current locale. On Windows, LOOT now implements case-insensitivity using the same case folding rules as Windows itself. On Linux, LOOT uses the locale-independent case folding rules provided by the ICU library, which are very similar but not identical to the rules used by Windows.

- Evaluating *version()* and *product_version()* conditions will no longer error if the given executable has no version fields. Instead, it will be evaluated as having no version. Via libloot.

- Sorting would not preserve the existing relative positions of plugins that had no relative positioning enforced by plugin data or metadata, if one or both of their filenames were not case-sensitively equal to their entries in plugins.txt / loadorder.txt. Load order position comparison is now correctly case-insensitive. Via libloot.

12.8.2 Changed

- Improved load order sorting performance.

- Game names and game folder names are now handled case-sensitively to avoid unnecessary and possibly incorrect case folding.

- Updated libloot to v0.14.8.

- Downgraded CEF to v3.3440.1806.g65046b7, as the hashes for v74.1.16+ge20b240+chromium-74.0.3729.131 kept changing unexpectedly, causing builds to fail.

- Updated the German translation.

- Updated the Japanese translation.

- Updated the Russian translation.

12.9 0.14.4 - 2019-05-11

12.9.1 Fixed

- Any instances of \. in messages would be incorrectly displayed as ..

- LOOT would unnecessarily ignore intermediate plugins in a non-master to master cycle involving groups, leading to unexpected results when sorting plugins (via libloot).

- `HearthFires.esm` was not recognised as a hardcoded plugin on case-sensitive filesystems, causing a cyclic interaction error when sorting Skyrim or Skyrim SE (via libloot).

12.9.2 Changed

- Groups that contain installed plugins can no longer be deleted in the groups editor.

- Clicking on a group in the groups editor will now display a list of the installed plugins in that group in the editor's sidebar.

- An error message is now displayed for each plugin that belongs to a nonexistent group.

- Game configuration can now include the root Registry key when specifying a registry key. If no root key is specified, `HKEY_LOCAL_MACHINE` is used. The recognised root keys are:

    - `HKEY_CLASSES_ROOT`

    - `HKEY_CURRENT_CONFIG`

    - `HKEY_CURRENT_USER`

    - `HKEY_LOCAL_MACHINE`

    - `HKEY_USERS`

- Updated the Russian translation.

- Updated libloot to v0.14.6.

- Updated CEF to v74.1.16+ge20b240+chromium-74.0.3729.131.

- Updated nlohmann/json to v3.6.1.

- Updated spdlog to v1.3.1.

12.10 0.14.3 - 2019-02-10

12.10.1 Fixed

- Plugin counters would be set to zero after cancelling a load order sort.

- The user interface would not display default values for some data if overriding values were removed (e.g. removing a plugin's user metadata would not set its group back to the default if no group was set in the masterlist).

- Saving user metadata with the default group would store that group membership in user metadata even if the plugin was already in the default group.

- Condition parsing now errors if it does not consume the whole condition string, so invalid syntax is not silently ignored (via libloot).

- Conditions were not parsed past the first instance of `file(<regex>)`, `active(<regex>)`, `many(<regex>)` or `many_active(<regex>)` (via libloot).

- LOOT could crash on startup or changing game when trying to check if the game or data paths are symlinks. If a check fails, LOOT will now assume the path is not a symlink. Via libloot.

12.10.2 Changed

- Updated libloot to v0.14.4.

12.11 0.14.2 - 2019-01-20

12.11.1 Fixed

- An error when loading plugins with a file present in the plugins directory that has a filename containing characters that cannot be represented in the system code page. Via libloot.

- An error when trying to read the version of an executable that does not have a US English version information resource. Executable versions are now read from the file's first version information resource, whatever its language. Via libloot.

12.11.2 Changed

- Updated libloot to 0.14.2.

12.12 0.14.1 - 2019-01-19

12.12.1 Fixed

- The LOOT update checker would fail when LOOT's version number was equal to the version number of the latest release.

12.13 0.14.0 - 2019-01-19

12.13.1 Added

- An error message will now be displayed for any light plugin that contains new records with FormIDs outside the valid range for light plugins.

- A warning message will now be displayed for any plugin that has a header version that is older than is used by the game, to help draw attention to plugins that have been incorrectly ported from older games. The header version checked is the value of the version field in the HEDR subrecord of the plugin's TES4 record.

- A section to the documentation that explains LOOT's sorting algorithm.

12.13.2 Fixed

- Creating a new group by pressing the Enter key after typing a name in the Groups Editor input field no longer leaves the group creation button enabled.

- Incorrect handling of non-ASCII characters in plugin filenames when getting their active load order indices, which could lead to incorrect indices being displayed in the sidebar.

- Incorrect handling of non-ASCII characters in games' LOOT folder names. By default all folder names only contained ASCII characters, so this would only affect customised folder names.

- BSAs/BA2s loaded by non-ASCII plugins for Oblivion, Fallout 3, Fallout: New Vegas and Fallout 4 may not have been detected due to incorrect case-insensitivity handling (via LOOT API).

- Fixed incorrect case-insensitivity handling for non-ASCII plugin filenames and File metadata names (via LOOT API).

- Path equivalence checks could be inaccurate as they were using case-insensitive string comparisons, which may not match filesystem behaviour. Filesystem equivalence checks are now used to improve correctness. (Via LOOT API).

- Errors due to filesystem permissions when cloning a new masterlist repository into an existing game directory. Deleting the temporary directory is now deferred until after its contents have been copied into the game directory, and if an error is encountered when deleting the temporary directory, it is logged but does not cause the masterlist update to fail. (Via LOOT API).

- The Czech translation mangled placeholders in message strings, causing errors when it was used.

12.13.3 Changed

- LOOT now requires a C++17-compatible compiler, so Windows builds now require the MSVC 2017 x86 redistributable instead of the MSVC 2015 x86 redistributable.

- The masterlist or default group for a plugin in the plugin editor's group dropdown is now styled with bold dark blue text to make it easier to undo user customisation of a plugin's group.

- Cyclic interaction errors will now detail the data source of each interaction in the cyclic path, to make it easier to identify the problematic metadata and so fix it.

- Updated the Japanese translation.

- Updated the German translation.

- LOOT now supports v0.14 of the metadata syntax (via LOOT API).

- Updated LOOT API, which has been renamed to libloot, to 0.14.1.

- Updated cpptoml to v0.1.1.

- Updated spdlog to v1.3.0.

- Updated nlohmann/json to v3.5.0.

- Updated JavaScript GUI dependencies.

12.14 0.13.6 - 2018-11-27

12.14.1 Fixed

- Load order indices in the sidebar were formatted incorrectly for light plugins.

12.15 0.13.5 - 2018-11-26

12.15.1 Fixed

- Out-of-bounds memory read that caused corruption in LOOT's `settings.toml` when LOOT is closed after having been unable to find any installed games.

12.15.2 Added

- An `--auto-sort` parameter that can be passed to `LOOT.exe` with `--game`, and which will cause LOOT to automatically sort the game's load order and apply the sorted load order, then quit. If an error is encountered at any point, auto-sort is cancelled.
- A Czech translation by ThePotatoChronicler.
- A documentation section that describes the sorting algorithm.

12.15.3 Changed

- Passing an invalid `--game` value as a parameter to `LOOT.exe` now causes an error to be displayed.
- The Groups Editor now uses a left-to-right layout when displaying the groups graph, which is clearer and more consistent than the previous layout.
- Updated GUI dependencies.
- Updated Japanese translation.

12.16 0.13.4 - 2018-09-25

12.16.1 Fixed

- Warnings were displayed for ghosted plugins saying they were invalid and would be ignored when they were not.
- Filesystem errors when trying to set permissions during a masterlist update that clones a new repository (via LOOT API).

12.16.2 Changed

- The Group dropdown menu in the metadata editor now "drops up" to reduce the amount of scrolling necesary by default to see the full list.

- The GUI is now based on a mix of Polymer 3 and React elements.

- Updated GUI dependencies.

- Updated LOOT API to v0.13.8.

12.17 0.13.3 - 2018-09-11

12.17.1 Fixed

- LOOT's "check for updates" functionality was failing due to the latest release unexpectedly not appearing on the first page of results when fetching repository tag data.

12.18 0.13.2 - 2018-09-10

12.18.1 Fixed

- Plugins with a *.esp* file extension and the light master flag set no longer appear as masters.

- Running LOOT outside of its executable's directory no longer results in a blank window.

- Cursor displaying as text selector in dropdown lists.

- Incompatibility messages not being displayed for non-plugin files.

- Fallout 4's *DLCUltraHighResolution.esm* is now handled as a hardcoded plugin (via libloadorder via the LOOT API).

- Plugins that are corrupt past their TES4 header are now handled gracefully when sorting and removed from the UI, with a warning message displayed for each removed plugin.

- Metadata editor text fields now trim whitespace to avoid unexpected metadata mismatches.

12.18.2 Changed

- Updated Boost to v1.67.0.

- Updated spdlog to v1.1.0.

- Updated Google Test to v1.8.1.

- Updated cpptoml v0.1.0.

- Updated CEF to v3.3440.1806.g65046b7.

- Updated nlohmann/json to v3.2.0.

- Updated LOOT API to v0.13.7 which should carry a number of performance improvements with it.

- Updated Danish translation.

12.19 0.13.1 - 2018-06-03

12.19.1 Changed

- Sorting now enforces hardcoded plugin positions without the need for LOOT metadata. This helps LOOT avoid producing invalid load orders, particularly those involving Creation Club plugins (via LOOT API).

- Updated LOOT API to v0.13.5.

- Updated spdlog to v0.17.0.

12.20 0.13.0 - 2018-06-02

12.20.1 Added

- Support for Skyrim VR.

- Support for plugin groups. Each plugin belongs to a group, and groups can load after zero or more other groups, providing a concise way to load groups of plugins after other groups of plugins. The group a plugin belongs to can be set in the metadata editor, and groups can be edited in the new Groups Editor accessible through the main menu.

- LOOT's update checking on startup can now be toggled from the settings dialog.

12.20.2 Changed

- Bash Tag suggestions now display tags that are present in the plugin's description field in silver text.

- Sorting error messages now includes the full path to `plugins.txt` when suggesting it may be read-only.

- Updated the LOOT API to v0.13.4.

- Updated CEF to v3.3325.1758.g9aea513.

- Updated nlohmann/json to v3.1.2.

12.20.3 Removed

- Support for local and global priority metadata. Priorities have been superseded by groups, which provide similar functionality more accessibly.

12.20.4 Fixed

- `Cannot read property 'status' of undefined` errors could occur when LOOT attempted to check for updated and no Internet connection was available.

- An error that occurred when attempting to apply edits to clean or dirty plugin metadata.

- A potential error during sorting if the number of plugins installed changed since LOOT was started or its content was last refreshed.

- An error when applying a load order for Oblivion, Fallout 3 or Fallout: New Vegas involving a plugin with a timestamp earlier than 1970-01-01 00:00:00 UTC (via LOOT API).

- An error when loading the current load order for Skyrim with a `loadorder.txt` incorrectly encoded in Windows-1252 (via LOOT API).

- Various filesystem-related issues that could be encountered when updating masterlists, including failure due to file handles being left open while attempting to remove the files they referenced (via LOOT API).

- Incorrect load order positions were given for light-master-flagged `.esp` plugins when getting the load order (via LOOT API).

- Closing LOOT with the metadata editor open or unapplied sorting results displayed would not display a confirmation dialog.

- Editable table rows for non-user metadata were not being made read-only.

- User metadata was not used when checking the validity of a plugin's install environment (e.g. if any incompatible plugins are present).

- Bash Tag removal suggestions were treated as addition suggestions unless the tag name was prefixed by an additional `-`.

- File metadata's `display` field wasn't used in generated UI messages.

- The top divider in a scrollable dialog could be hidden when scrolling.

12.21 0.12.5 - 2018-03-19

12.21.1 Fixed

- LOOT now checks that its game subdirectories are actually directories, not just that they exist, erroring earlier and more helpfully when there is somehow a file with the same name in the LOOT data directory.

- Windows 7 users can now update their masterlists again without having to manually enable system-wide TLS 1.2 support. This was an issue after GitHub disabled support for older, insecure versions of TLS encryption because Microsoft didn't enable TLS 1.2 support in Windows 7 by default. Fixed via the LOOT API.

12.21.2 Changed

- Migrated all non-Polymer GUI dependencies from Bower to NPM.

- Refactored GUI JavaScript and custom elements into ES2015 modules.

- Introduced Webpack to bundle JavaScript and CSS for the GUI.

- Updated Polymer to v2.5.0.

- Updated the LOOT API to v0.12.5.

12.22 0.12.4 - 2018-02-22

12.22.1 Fixed

- Loading or saving a load order could be very slow because the plugins directory was scanned recursively, which is unnecessary. In the reported case, this fix caused saving a load order to go from 23 seconds to 43 milliseconds (via the LOOT API).

- Plugin parsing errors were being logged with trace severity, they are now logged as errors (via the LOOT API).

- Chromium console messages are now logged with severity levels that better match the severity with which they appear in the console (via the LOOT API).

- Saving a load order for Oblivion, Fallout 3 or Fallout: New Vegas now updates plugin access times to the current time for correctness (via the LOOT API).

12.22.2 Changed

- Added a specific message for sorting errors that mentions plugins.txt probably being read-only, as it's the most common cause of issues filed.

- Added missing mentions of Fallout 4 VR support.

- Performance improvement for load order operations (via the LOOT API).

- Updated the LOOT API to v0.12.4.

- Updated spdlog to v0.16.3.

- Updated nlohmann/json to v3.1.1.

- Updated CEF to v3.3282.1733.g9091548.

12.23 0.12.3 - 2018-02-10

12.23.1 Fixed

- LOOT wouldn't start when run by a user with a `%LOCALAPPDATA` path containing non-ASCII characters, which was a regression introduced in v0.12.0.

- The log buffer is flushed after every statement, fixing the regression introduced in v0.12.2.

- The uninstaller didn't remove `settings.toml`.

12.23.2 Changed

- Disabled CEF debug logging, as the `CEFDebugLog.txt` has generally been more misleading than helpful.

12.24 0.12.2 - 2018-02-05

12.24.1 Added

- Support for Fallout 4 VR.

- Support for configuring games' local paths, i.e. the directory in which their `plugins.txt` is stored. Each game entry in LOOT's `settings.toml` now has a `local_path` variable that is blank by default, which leaves it up to libloadorder (via the LOOT API) to determine the path. There is no GUI option to configure the value.

- Chromium console messages are now logged to `LOOTDebugLog.txt` to help when debugging.

12.24.2 Changed

- Updated LOOT API to v0.12.3.

- Replaced Protocol Buffers serialisation dependency with nlohmann/json v2.1.1.

- Replaced Boost.Log with spdlog v0.14.0.

- Downgraded Boost to 1.63.0 to take advantage of pre-built binaries on AppVeyor.

- Updated Japanese translation.

12.24.3 Removed

- The `--game-appdata-path` CLI parameter, which set the local path to use for all games, and which has been superceded by game-specific `local_path` configuration variables.

12.24.4 Fixed

- Plugins with a `.esp` file extension and the light master flag set are no longer treated as masters when sorting, so they can have other `.esp` files as masters without causing cyclic interaction sorting errors (via LOOT API).

- Sorting didn't update sidebar indices.

12.25 0.12.1 - 2017-12-03

12.25.1 Fixed

- Settings would not save correctly with debug logging disabled.

- LOOT API logging was disabled on Linux.

- Typos in the v0.12.0 changelog.

12.26 0.12.0 - 2017-12-02

12.26.1 Added

- Support for light master (`.esl`) plugins.

    - Light masters are indicated by a new icon on their plugin cards, and the "Master File" icon is suppressed for light masters.

    - In the sidebar, light masters all have the in-game load order index `FE`, followed by the hexadecimal index of the light master relative to only other light masters.

    - A new general warning message will be displayed when 255 normal plugins and at least one light master are active.

    - A new error message will be displayed for light masters that depend on a non-master plugin.

- Support for specifying the game local app data path using the `--game-appdata-path=<path>` command line parameter.

- Japanese translation by kuroko137.

12.26.2 Changed

- LOOT now stores its settings in a `settings.toml` file instead of a `settings.yaml` file. It cannot upgrade from the latter to the former itself, but a converter is available online.

- "Copy Load Order" now includes a third column for the index of light masters relative to other light masters.

- Updated the UI to use Polymer v2 and updated LOOT's custom elements to use the Custom Elements v1 syntax.

- LOOT API log messages are now included in the `LOOTDebugLog.txt` file, and are no longer written to `LOOTAPIDebugLog.txt`.

- Updated the Chinese translation.

- Updated the Danish translation.

- Updated the Russian translation.

- Updated the LOOT API to v0.12.1.

- Updated Lodash to b4.17.4.

- Updated Octokat to v0.8.0.

- Updated CEF to v3.3163.1671.g700dc25.

12.26.3 Fixed

- Error when adding a Bash Tag with no condition using the metadata editor.

- Detection of Skyrim and Skyrim SE when LOOT is installed in the same directory as both.

- General messages disappearing when cancelling a sort.

- Blank messages' content in the metadata editor after updating the masterlist.

- LOOT window size/position not restoring maximised state correctly.

- "Cannot read property of 'text' of undefined" error messages when something went wrong.

- The "new version available" message is no longer displayed for snapshot builds built from code newer than the latest release.

- Significant fixes in the LOOT API:

  - A crash would occur when loading an plugin that had invalid data past its header. Such plugins are now just silently ignored.

  - LOOT would not resolve game or local data paths that are junction links correctly, which caused problems later when trying to perform actions such as loading plugins.

  - Performing a masterlist update on a branch where the remote and local histories had diverged would fail. The existing local branch is now discarded and the remote branch checked out anew, as intended.

12.27 0.11.0 - 2017-05-13

12.27.1 Changed

- The LOOT application now uses the LOOT API, rather than sharing internal code with it.

- LOOT now writes to an additional log file, `LOOTAPIDebugLog.txt`.

- If LOOT is closed while maximised, it will now start maximised.

- Log timestamps now have microsecond precision.

- Updated to CEF v3.2924.1561.g06fde99.

- The LOOT API has had its code split into its own repository. Its documentation, along with the metadata syntax documentation, is now hosted separately.

12.27.2 Fixed

- A few inaccurate logging statements.

- Menu text wrapping during opening animation.

- Inconsistent editor priority values handling, causing priority values user metadata to not trigger the "Has User Metadata" icon appearing in certain circumstances.

- The LOOT window's title is now set on Linux.

- The LOOT window's size and position is now saved and restored on Linux.

- Clipboard operations are now supported on Linux (requires `xclip` to be installed).

12.28 0.10.3 - 2017-01-08

12.28.1 Added

- LOOT now creates a backup of the existing load order when applying a sorted load order. The backup is stored in LOOT's folder for the current game, and up to the three most recent backups are retained.

12.28.2 Changed

- If no game is detected when LOOT is launched and a valid game path or Registry key pointing to a game path is added in the Settings dialog, LOOT will select that game and refresh its content when the new settings are applied.

- Most exception-derived errors now display a generic error message, as exception messages are no longer translatable. Only metadata syntax exceptions still have their message displayed in the UI.

- Improved robustness of error handling when calculating file CRCs.

- Improved consistency of error logging.

- Errors and warnings are now always logged, even when debug logging is disabled.

- The First Time Tips and About dialogs are now fully translatable, with the exception of the legal text in the About dialog.

- Updated Russian translation.

12.28.3 Fixed

- A crash on startup if none of the supported games were detected.

- A crash when applying settings when none of the supported games are detected.

- Buttons and menu items for performing game-specific operations are now disabled while none of the supported games are detected.

- Initialisation error messages were formatted incorrectly.

- An error message reading `Cannot read property 'textContent' of undefined` could be displayed on startup due to UI elements initialising later than expected.

- The texts of the first plugin card and sidebar item were not being translated.

- LOOT now logs being unable to find a game's registry entry as `[info]`, not `[error]`.

- If an error was encountered while loading a userlist, constructing the error message produced a `boost::too_many_args` error that obscured the original error.

- The installer now checks for v14.0.24215 of the MSVC Redistributable, it was previously checking for v14.0.24212, which some users found insufficient.

12.29 0.10.2 - 2016-12-03

12.29.1 Added

- Support for specifying the path to use for LOOT's local data storage, via the `--loot-data-path` parameter.

12.29.2 Changed

- The metadata editor now displays an error message when the user inputs invalid priority values, in addition to the input's existing red underline styling for invalid values, and instead of validating the values when trying to save the metadata.

- LOOT's icon now scales better for high-DPI displays.

- LOOT's UI is now built as many loose files instead of one large HTML file, to aid debugging and development.

- Updated Chinese translation.

- Updated Chromium Embedded Framework to 3.2840.1517.gd7afec5.

- Updated libgit2 to 0.24.3.

- Updated Polymer to 1.7.0, and also updated various Polymer elements.

12.29.3 Fixed

- A crash could occur if some plugins that are hardcoded to always load were missing. Fixed by updating to libloadorder v9.5.4.

- Plugin cleaning metadata with no `info` value generated a warning message with no text.

- The LOOT update checker will no longer display an empty error dialog if the update check is unable to connect to the GitHub API (eg. if offline).

- Redate Plugins was accidentally disabled for Skyrim SE in v0.10.1, and had no effect for Skyrim SE in v0.10.0.

- Having more than ~ 100 plugins installed could make the sidebar's plugin list appear on top of dialogs.

- More UI text has been made available for translation.

- Tweak some text formatting to include more context for translators.

- Dirty plugin warning messages now distinguish between singular and plural forms for their ITM, deleted reference and deleted navmesh counts, to allow the construction of more grammatically-correct messages in English and other languages.

- The UI text for the metadata editor was always displayed in English even when LOOT was set to use another language, despite translations being available.

- It was possible to open the metadata editor during sorting by double-clicking a plugin in the sidebar.

- Removed a duplicate section in the documentation for editing metadata.

12.30 0.10.1 - 2016-11-12

12.30.1 Changed

- When saving a load order for Fallout 4 or Skyrim SE, the official plugins (including DLC plugins) are no longer written to `plugins.txt` to match game behaviour and improve interoperability with other modding utilities.

- LOOT now uses `Skyrim Special Edition` as the folder name for storing its Skyrim SE data, to mirror the game's own folder naming and improve interoperability with other modding utilities, and automatically renames any `SkyrimSE` folder created by LOOT v0.10.0.

- Updated Russian translation.

- Updated Chinese translation.

12.30.2 Fixed

- When saving a load order for Fallout 4 or Skyrim SE, the positions of official plugins (including DLC plugins) in `plugins.txt` are now ignored if they are present and a hardcoded order used instead. Note that there is a bug in Skyrim SE v1.2.39 that causes the DLC plugins to be loaded in timestamp order: this behaviour is ignored.

- If the LOOT installer installed the MSVC redistributable, the latter would silently force a restart, leading to possible data loss.

- It was possible to open the metadata editor between sorting and applying/cancelling a sorted load order, which would then cause an error when trying to close the editor. The editor is now correctly disabled during the sort process.

12.31 0.10.0 - 2016-11-06

12.31.1 Added

- Support for TES V: Skyrim Special Edition.

- Swedish translation by Mikael Hiort af Ornäs (Lakrits).

- More robust update checker, so now LOOT will notify users of an update without needing a masterlist to be present or for it to be updated for the new release, and will also detect when the user is using a non-release build with the same version number.

12.31.2 Changed

- LOOT now supports v0.10 of the metadata syntax. This breaks compatibility with existing syntax, which may cause existing user metadata to fail to load. See the syntax version history for the details.

- The Global Priority toggle button in the metadata editor has been replaced with an input field to reflect the change in syntax for global priorities.

- Added a "Clean Plugin Info" tab to the metadata editor, for editing metadata that identifies a plugin as being clean.

- Added a "Verified clean" icon to plugin cards that is displayed for plugins that are identified as clean.

- All operations triggered from the UI are now processed asynchronously, which may have a minor positive effect on perceived performance.

- Error messages displayed in dialog boxes no longer include an error code.

- Rewrote the documentation, which is now hosted online at Read The Docs.

- Updated Simplified Chinese translation.

- Updated Russian translation.

- Updated German translation.

- Updated Danish translation.

- Updated CEF to 3.2840.1511.gb345083 and libgit2 to 0.24.2.

12.31.3 Fixed

- Cached plugin CRCs causing checksum conditions to always evaluate to false.

- Data being loaded twice when launching LOOT.

- Updating the masterlist when the user's `TEMP` and `TMP` environmental variables point to a different drive than the one LOOT is installed on.

- Incorrect error message display when there was an issue during initialisation.

- Sidebar plugin load order indices not updating when sorting changed plugin positions.

- The "Has User Metadata" icon not displaying when priority metadata was changed.

12.32 0.9.2 - 2016-08-03

12.32.1 Added

- Theming support and the dark theme have been reimplemented and reintroduced.

- Plugin filename and Bash Tag name fields will now autocomplete in the metadata editor.

- The in-game load order indices of active plugins are now displayed in the sidebar.

12.32.2 Changed

- Most URLs now use HTTPS.

- The Danish and French translations have been updated.

- The CEF (3.2743.1442.ge29124d), libespm (2.5.5), Polymer (1.6.0) and Pseudosem (1.1.0) dependencies have been updated to the versions given in brackets.

12.32.3 Fixed

- Error when applying filters on startup.

- Hidden plugin and message counters not updating correctly after sorting.

- An error occurring when the user's temporary files directory didn't exist and updating the masterlist tried to create a directory there.

- The installer failing if LOOT was previously installed on a drive that no longer exists. The installer now always gives the option to change the default install path it selects.

- Startup errors being reported incorrectly and causing additional errors that prevented the user from being informed of the original issue.

- The metadata editor's CRC input field being too short to fully display its validation error message.

- Errors when reading some Oblivion plugins during sorting, including the official DLC.

- Some cases where LOOT would fail to start.

- The conflict filter not including the Unofficial Skyrim Legendary Edition Patch's plugin (and any other plugin that overrides a very large number of records) in results.

- The "not sorted" message reappearing if the load order was sorted twice in one session and cancelled the second time.

- Version numbers where a digit was immediately followed by a letter not being detected.

12.33 0.9.1 - 2016-06-23

12.33.1 Added

- Support for Fallout 4's Contraptions Workshop DLC, and the upcoming Vault-Tec Workshop and Nuka-World DLC. Support for the latter two is based on their probable but unconfirmed plugin names, which may be subject to change.

12.33.2 Changed

- The content refresh menu item is now disabled during sorting.

- The conflicts filter toggle buttons have been removed from the plugin card menus, and the filter re-implemented as a dropdown menu of plugin names in the Filters sidebar tab.

- Enabling the conflicts filter now scrolls to the target plugin, which is no longer highlighted with a blue border.

- The layout of the Filters sidebar tab has been improved.

- The CEF (3.2704.1427.g95055fe), and libloadorder (9.4.0) dependencies have been updated to the versions given in brackets.

- Some code has been refactored to improve its quality.

12.33.3 Removed

- Support for Windows Vista.

12.33.4 Fixed

- User dirty metadata being read-only in the metadata editor.

- LOOT incorrectly reading a tag with no name from plugin descriptions containing `{{BASH:}}`.

12.34 0.9.0 - 2016-05-21

12.34.1 Added

- Support for Fallout 4.

- A warning message is displayed in the General Information card if the user has not sorted their load order in the current LOOT session.

- An error message is displayed in the General Information card when a cyclic interaction sorting error is encountered, and remains there until sorting is next attempted.

12.34.2 Changed

- Improve sorting performance by only reading the header when loading game's main master file.

- References to "BSAs" have been replaced with the more generic "Archives" as Fallout 4's BSA equivalents use a different file extension.

- The sorting process now recognises when the sorted load order is identical to the existing load order and informs the user, avoiding unnecessary filesystem interaction.

- The metadata editor has been reimplemented as a single resizeable panel displayed below the plugin card list instead of a separate editor for each plugin card.

- Editable table styling has been improved to more closely align to the Material Design guidelines.

- Minor UI changes have been made to scrollbar and focus outline styling to improve accessibility.

- UI interaction performance has been improved, especially when scrolling the plugin card list.

- The PayPal donation link now points to the PayPal.Me service, which has a more polished UX and lower fees.

- LOOT's settings file handling has been reimplemented, fixing crashes due to invalid settings values and allowing missing settings to use their default values.

- Plugin version string extraction has been reimplemented, improving its accuracy and maintainability.

- Plugin CRC, file and version condition evaluation has been optimised to use cached data where it exists, avoiding unnecessary filesystem interaction.

- The French and Danish translations have been updated.

- The installer now only creates one shortcut for LOOT in the Start menu, following Microsoft guidelines.

- A lot of code has been refactored and improved to increase its quality.

- The Boost (1.60), CEF (3.2623.1401.gb90a3be), libespm (2.5.2), libgit2 (0.24.1), libloadorder (9.3.0) and Polymer (1.4) dependencies have been updated to the versions given in brackets.

12.34.3 Removed

- The Flattr donation link.

- The experimental theming support, as its implementation was incompatible with Polymer 1.2's styling mechanisms.

12.34.4 Fixed

- Redate Plugins attempted to redate plugins that were missing, causing an error.

- LOOT would not launch when run by a user with a non-ASCII local application data path.

- Sorting processed priority value inheritance throughout the load order incorrectly, leading to some plugins being positioned incorrectly.

- The conflict filter displayed only the target plugin when enabled for the first time in a session.

- The behaviour of the search functionality was inconsistent.

- Duplicate messages could be displayed under certain circumstances.

- Opening the metadata editor for one plugin displayed the metadata for another plugin under certain circumstances.

- Changing the current game quickly could leave the UI unresponsive.

- Applying a filter then scrolling the plugin card list would display some cards with no content.
- Plugin cards would disappearing when jumping to a plugin card near the bottom of the load order using the sidebar.
- Clicking on a disabled element in a dropdown menu would cause the menu to close.
- The UI font size was too large, due to a misunderstanding of the Material Design guidelines.
- Attempting to build native Linux and 64-bit executables produced errors. Such builds are unsupported and no official builds are planned.

12.35 0.8.1 - 2015-09-27

12.35.1 Added

- Checks for safe file paths when parsing conditions.

12.35.2 Changed

- Updated Chinese translation.
- Updated Boost (1.59.0), libgit2 (0.23.2) and CEF (branch 2454) dependencies.

12.35.3 Fixed

- Crash when loading plugins due to lack of thread safety.
- The masterlist updater and validator not checking for valid condition and regex syntax.
- The masterlist updater not working correctly for Windows Vista users.

12.36 0.8.0 - 2015-07-22

12.36.1 Added

- Support for loading custom user interface themes, and added a dark theme.

12.36.2 Changed

- Improved detail of metadata syntax error messages.
- Improved plugin loading performance for computers with weaker multithreading capabilities (eg. non-hyperthreaded dual-core or single-core CPUs).
- LOOT no longer displays validity warnings for inactive plugins.
- LOOT now displays a more user-friendly error when a syntax error is encountered in an updated masterlist.
- Metadata syntax support changes, see the metadata syntax document for details.
- LOOT's installer now uses Inno Setup instead of NSIS.

- LOOT's installer now uninstalls previous versions of LOOT silently, preserving user data, instead of displaying the uninstaller UI.

- Updated German and Russian translations.

- Updated libgit2 to v0.23.0.

12.36.3 Fixed

- "Cannot read property 'push' of undefined" errors when sorting.

- Many miscellaneous bugs, including initialisation crashes and incorrect metadata input/output handling.

- Metadata editors not clearing unsaved edits when editing is cancelled.

- LOOT silently discarding some non-unique metadata: an error message will now be displayed when loading or attempting to apply such metadata.

- Userlist parsing errors being saved as general messages in the userlist.

- LOOT's version comparison behaviour for a wide variety of version string formats. This involved removing LOOT's usage of the Alphanum code library.

12.37 0.7.1 - 2015-06-22

12.37.1 Added

- Content search, accessible from an icon button in the header bar, and using the Ctrl-F keyboard shortcut.

- "Copy Load Order" feature to main menu.

12.37.2 Changed

- LOOT now uses versioned masterlists, so that new features can be used without breaking LOOT for users who haven't yet updated.

- Moved content filter into Filters sidebar tab. The Ctrl-F keyboard shortcut no longer focusses the content filter.

- Checkbox-toggled filters now have their last state restored on launch.

- Darkened background behind cards to increase contrast.

- Updated French translation.

12.37.3 Fixed

- LOOT UI opening in default browser on launch.

- "No existing load order position" errors when sorting.

- Message filters being ignored by plugin cards after navigating the list.

- Output of Bash Tag removal suggestions in userlists.

- Display of masterlist revisions where they were wrongly interpreted as numbers.

12.38 0.7.0 - 2015-05-20

12.38.1 Added

- Danish and Korean translations.

- If LOOT can't detect any installed games, it now launches to the settings dialog, where the game settings can be edited to allow a game to be detected.

- A "Copy Content" item in the main menu, to copy the plugin list and all information it contains to the clipboard as YAML-formatted text.

- A "Refresh Content" item in the main menu, which re-scans plugin headers and updates LOOT's content.

- LOOT is now built with High DPI display support.

- Masterlist updates can now be performed independently of sorting.

- A "First-Time Tips" dialog will be displayed on the first run of any particular version of LOOT.

- Attempting to close LOOT with an unapplied sorted load order or an open plugin editor will trigger a confirmation dialog.

- Support for GitHub Flavored Markdown in messages, minus features specific to the GitHub site, such as @mentions and emoji.

- Support for message content substitution metadata syntax in the masterlist.

- Display of LOOT's build revision has been added to the "About" dialog.

- Plugin location metadata can now be added through the user interface.

- A content filter, which hides plugins that don't have the filter text present in their filenames, versions, CRCs, Bash Tags or messages.

12.38.2 Changed

- New single-window HTML5-based interface and a new icon, based on Google's Material Design.

  - LOOT now parses the masterlist and plugin headers on startup, and the resulting content is displayed with the plugins in their current load order.

  - Each plugin now has its own editor, and multiple editors can be opened at once.

  - Drag 'n' drop of plugins from the sidebar into metadata editor tables no longer requires the conflicts filter to be enabled.

  - CRCs are calculated during conflict filtering or sorting, so are notdisplayed until either process has been performed.

  - The "View Debug Log" menu item has been replaced with a "Open Debug Log Location" menu item to make it easier to share the file itself.

  - Debug logging control has been simplified to enable/disable, replacing the "Debug Verbosity" setting with an "Enable Debug Logging" toggle.

  - Changes to game settings now take immediate effect.

  - Masterlist updating now exits earlier if the masterlist is already up-to-date.

  - Masterlist revisions are now displayed using the shortest unique substring that is at least 7 characters long.

- Making edits to plugin metadata before applying a calculated load order no longer causes LOOT to recalculate the load order. Instead, the displayed load order is applied, and the metadata edits will be applied the next time sorting is performed.

- All references to "UDRs" have been replaced by the more technically-correct "Deleted References" term.

- The "Hide inactive plugin messages" filter has been replaced by a "Hide inactive plugins" filter.

- Copied metadata is now wrapped in BBCode `[spoiler][code]...[/code][/spoiler]` tags for easier pasting into forum posts.

- The Summary and General Messages cards have been combined into a General Information card.

- Sorting performance improvements.

- Updated Boost (1.58.0), libgit2 (0.22.2) and libloadorder dependencies.

12.38.3 Removed

- Messages with multiple language strings can no longer be created through the user interface. User-added multiple-language messages will be converted to single-language strings if their plugin's editor is opened then closed using the "OK" button.

- The "Copy Name" menu item has been removed, as plugin names can now be selected and copied using `Ctrl-C`.

- As LOOT no longer generates reports, it doesn't save them either.

12.38.4 Fixed

- The `settings.yaml` included with the installer was very old.

- Inactive incompatibilities were displayed as error messages. They are now displayed as warnings.

- Masterlist entries that matched the same plugin were not being merged. Now one exact match and any number of regex matches will be merged.

- Masterlist updating failed when a fast-forward merge was not possible (eg. when remote has been rebased, or a different repository is used). Such cases are now handled by deleting the local repository and re-cloning the remote.

- Masterlist updating failed when the path to LOOT's folder included a junction link.

- Masterlists would not 'update' to older revisions. This can be useful for testing, so now they can do so.

- Crashes when trying to read corrupt plugins and after masterlist update completion.

- LOOT would crash when trying to detect a game installed to a location in which the user does not have read permissions, now such games are treated as not being installed.

- Plugins with non-ASCII description text would cause `codecvt to wstring` errors.

- LOOT would accept any file with a `.esp` or `.esm` extension as a plugin. It now checks more thoroughly, by attempting to parse such files' headers.

- LOOT would only detect Skyrim plugins as loading BSAs. Plugins for the other games that also load BSAs are now correctly detected as such.

- Depending on the plugins involved, sorting could produce a different load order every time it was run. Sorting now produces unchanging load orders, using existing load order position where there is no reason to move a plugin.

12.39 0.6.1 - 2014-12-22

12.39.1 Added

- German translation.

- The Large Address Aware flag to the LOOT executable.

12.39.2 Changed

- Updated Boost (1.57.0), wxWidgets (3.0.2) and libloadorder (6.0.3) dependencies.

- The game menu is now updated when the settings window is exited with the "OK" button.

- Updated Russian translation.

- Updated Brazilian Portuguese translation.

12.39.3 Fixed

- Default Nehrim registry entry path.

- Messages in the wrong language being selected.

- LOOT windows opening off-screen if the screen area had been changed since last run.

- Read-only `.git` folders preventing repository deletion.

- Unnecessary plugins in cyclic dependency error messages.

- Bash Tag suggestions displaying incorrectly.

- The current game can no longer be deleted from the settings window.

- Plugin metadata being lost when the settings window was exited with the "OK" button, leading to possible condition evaluation issues.

- A blank report bug when running on systems which don't have Internet Explorer 11 installed.

- Reports appearing empty of all content when no global messages are to be displayed.

12.39.4 Security

- Updated libgit2 to 0.21.3, which includes a fix for a critical security vulnerability.

12.40 0.6.0 - 2014-07-05

12.40.1 Added

- Display of masterlist revision date in reports.

- Report filter for inactive plugin messages.

- The number of dirty plugins, active plugins and plugins in total to the report summary.

- A find dialog to the report viewer, initiated using the `Ctrl-F` keyboard shortcut.

- LOOT's windows now remember their last position and size.

- Command line parameter for selecting the game LOOT should run for.

- Finnish translation.

12.40.2 Changed

- Unified and improved the metadata editors launched during and outside of sorting.

    - The metadata editor now resizes more appropriately.

    - The mid-sorting instance hides the requirement, incompatibility, Bash Tags, dirty info and message lists.

    - Both instances now have a conflict filter, priority display in their plugin list and drag 'n' drop from the plugin list into whatever metadata lists are visible.

    - The mid-sorting instance also hides the load after entry edit button, and the button to add new entries (so drag 'n' drop is the only available method of adding entries).

    - The metadata editor now displays plugins with user edits using a tick beside their name, rather than bolding their name text.

    - Plugins that have been edited in the current instance have their list entry text bolded.

    - Checkboxes have been added to set whether or not a priority value is "global". The UI also now displays the priority value used in comparisons (ie. with the millions and higher digits omitted).

    - A right-click menu command for clearing all user-added metadata for all plugins has been added to the metadata editor.

- Missing master/requirement and incompatibility errors are downgraded to warnings if the plugin in question is inactive.

- Masterlist update errors have been made more user-friendly.

- If an error is encountered during masterlist update, LOOT will now silently delete the repository folder and attempt the update again. If it fails again, it will then report an error.

- Masterlist update now handles repository interaction a lot more like Git itself does, so should be less error-prone.

- Cyclic dependency error messages now detail the full cycle.

- LOOT's report now uses a static HTML file and generates a javascript file that is dynamically loaded to contain the report data. This removes the PugiXML build dependency.

- Debug log message priorities adjusted so that medium verbosity includes more useful data.

- Updated dependencies: libgit2 (v0.21.0), wxWidgets (v3.0.1), libloadorder (latest), libespm (latest).

12.40.3 Removed

- Support for Windows XP.

- Support for loading BOSS masterlists using the API. This was a leftover from when LOOT was BOSSv3 and backwards compatibility was an issue.

- The ability to open reports in an external browser. This was necessitated by the changes to report generation.

- The MSVC 2013 redistributable requirement.

- The "None Specified" language option is no longer available: English is the new default.

12.40.4 Fixed

- The uninstaller not removing the Git repositories used to update the masterlists.

- Miscellaneous crashes due to uncaught exceptions.

- Plugin priorities are now temporarily "inherited" during sorting so that a plugin with a low priority that is made via metadata to load after a plugin with a high priority doesn't cause other plugins with lower priorities to be positioned incorrectly.

- The default language is now correctly set to English.

- Defaults for the online masterlist repository used for Nehrim.

- Endless sorting loop that occurred if some user metadata was disabled.

12.41 0.5.0 - 2014-03-31

- Initial release.

COPYRIGHT NOTICE

LOOT and its API are distributed under the GNU General Public License v3.0. The documentation is distributed under the GNU Free Documentation License v1.3. The full texts of both licenses are included in *Copyright License Texts*.

While the GPL license allows anyone to make derivative works of LOOT, the LOOT Team encourages those thinking of doing so to first discuss their reasoning for such an endeavour with the Team. It may be that what the derivative work would do differently is already planned for a future version of LOOT or would be happily integrated into LOOT, thus avoiding any extra effort by others.

LOOT has been specifically designed to prevent it being locked into the LOOT Team's official masterlist repositories. Nevertheless, the LOOT Team appeals to the community to avoid the distribution of unofficial masterlists, as this would only hamper the effort to create one set of stores for load order information. Any issues with a masterlist are best brought to the attention of the LOOT Team so that they may be remedied.

```
                    GNU GENERAL PUBLIC LICENSE
                       Version 3, 29 June 2007

 Copyright (C) 2007 Free Software Foundation, Inc. <http://fsf.org/>
 Everyone is permitted to copy and distribute verbatim copies
 of this license document, but changing it is not allowed.

                            Preamble

  The GNU General Public License is a free, copyleft license for
software and other kinds of works.

  The licenses for most software and other practical works are designed
to take away your freedom to share and change the works.  By contrast,
the GNU General Public License is intended to guarantee your freedom to
share and change all versions of a program--to make sure it remains free
software for all its users.  We, the Free Software Foundation, use the
GNU General Public License for most of our software; it applies also to
```

any other work released this way by its authors. You can apply it to
your programs, too.

   When we speak of free software, we are referring to freedom, **not**
price. Our General Public Licenses are designed to make sure that you
have the freedom to distribute copies of free software (**and** charge **for**
them **if** you wish), that you receive source code **or** can get it **if** you
want it, that you can change the software **or** use pieces of it **in** new
free programs, **and** that you know you can do these things.

   To protect your rights, we need to prevent others **from denying** you
these rights **or** asking you to surrender the rights. Therefore, you have
certain responsibilities **if** you distribute copies of the software, **or if**
you modify it: responsibilities to respect the freedom of others.

   For example, **if** you distribute copies of such a program, whether
gratis **or for** a fee, you must **pass** on to the recipients the same
freedoms that you received. You must make sure that they, too, receive
or can get the source code. And you must show them these terms so they
know their rights.

   Developers that use the GNU GPL protect your rights **with** two steps:
(1) **assert** copyright on the software, **and** (2) offer you this License
giving you legal permission to copy, distribute **and**/**or** modify it.

   For the developers' and authors' protection, the GPL clearly explains
that there **is** no warranty **for** this free software. For both users' and
authors' sake, the GPL requires that modified versions be marked as
changed, so that their problems will **not** be attributed erroneously to
authors of previous versions.

   Some devices are designed to deny users access to install **or** run
modified versions of the software inside them, although the manufacturer
can do so. This **is** fundamentally incompatible **with** the aim of
protecting users' freedom to change the software. The systematic
pattern of such abuse occurs **in** the area of products **for** individuals to
use, which **is** precisely where it **is** most unacceptable. Therefore, we
have designed this version of the GPL to prohibit the practice **for** those
products. If such problems arise substantially **in** other domains, we
stand ready to extend this provision to those domains **in** future versions
of the GPL, **as** needed to protect the freedom of users.

   Finally, every program **is** threatened constantly by software patents.
States should **not** allow patents to restrict development **and** use of
software on general-purpose computers, but **in** those that do, we wish to
avoid the special danger that patents applied to a free program could
make it effectively proprietary. To prevent this, the GPL assures that
patents cannot be used to render the program non-free.

   The precise terms **and** conditions **for** copying, distribution **and**
modification follow.

```
                        TERMS AND CONDITIONS

  0. Definitions.

  "This License" refers to version 3 of the GNU General Public License.

  "Copyright" also means copyright-like laws that apply to other kinds of
works, such as semiconductor masks.

  "The Program" refers to any copyrightable work licensed under this
License.  Each licensee is addressed as "you".  "Licensees" and
"recipients" may be individuals or organizations.

  To "modify" a work means to copy from or adapt all or part of the work
in a fashion requiring copyright permission, other than the making of an
exact copy.  The resulting work is called a "modified version" of the
earlier work or a work "based on" the earlier work.

  A "covered work" means either the unmodified Program or a work based
on the Program.

  To "propagate" a work means to do anything with it that, without
permission, would make you directly or secondarily liable for
infringement under applicable copyright law, except executing it on a
computer or modifying a private copy.  Propagation includes copying,
distribution (with or without modification), making available to the
public, and in some countries other activities as well.

  To "convey" a work means any kind of propagation that enables other
parties to make or receive copies.  Mere interaction with a user through
a computer network, with no transfer of a copy, is not conveying.

  An interactive user interface displays "Appropriate Legal Notices"
to the extent that it includes a convenient and prominently visible
feature that (1) displays an appropriate copyright notice, and (2)
tells the user that there is no warranty for the work (except to the
extent that warranties are provided), that licensees may convey the
work under this License, and how to view a copy of this License.  If
the interface presents a list of user commands or options, such as a
menu, a prominent item in the list meets this criterion.

  1. Source Code.

  The "source code" for a work means the preferred form of the work
for making modifications to it.  "Object code" means any non-source
form of a work.

  A "Standard Interface" means an interface that either is an official
standard defined by a recognized standards body, or, in the case of
interfaces specified for a particular programming language, one that
is widely used among developers working in that language.
```

```
    The "System Libraries" of an executable work include anything, other
than the work as a whole, that (a) is included in the normal form of
packaging a Major Component, but which is not part of that Major
Component, and (b) serves only to enable use of the work with that
Major Component, or to implement a Standard Interface for which an
implementation is available to the public in source code form.  A
"Major Component", in this context, means a major essential component
(kernel, window system, and so on) of the specific operating system
(if any) on which the executable work runs, or a compiler used to
produce the work, or an object code interpreter used to run it.

    The "Corresponding Source" for a work in object code form means all
the source code needed to generate, install, and (for an executable
work) run the object code and to modify the work, including scripts to
control those activities.  However, it does not include the work's
System Libraries, or general-purpose tools or generally available free
programs which are used unmodified in performing those activities but
which are not part of the work.  For example, Corresponding Source
includes interface definition files associated with source files for
the work, and the source code for shared libraries and dynamically
linked subprograms that the work is specifically designed to require,
such as by intimate data communication or control flow between those
subprograms and other parts of the work.

    The Corresponding Source need not include anything that users
can regenerate automatically from other parts of the Corresponding
Source.

    The Corresponding Source for a work in source code form is that
same work.

    2. Basic Permissions.

    All rights granted under this License are granted for the term of
copyright on the Program, and are irrevocable provided the stated
conditions are met.  This License explicitly affirms your unlimited
permission to run the unmodified Program.  The output from running a
covered work is covered by this License only if the output, given its
content, constitutes a covered work.  This License acknowledges your
rights of fair use or other equivalent, as provided by copyright law.

    You may make, run and propagate covered works that you do not
convey, without conditions so long as your license otherwise remains
in force.  You may convey covered works to others for the sole purpose
of having them make modifications exclusively for you, or provide you
with facilities for running those works, provided that you comply with
the terms of this License in conveying all material for which you do
not control copyright.  Those thus making or running the covered works
for you must do so exclusively on your behalf, under your direction
and control, on terms that prohibit them from making any copies of
your copyrighted material outside their relationship with you.
```

```
   Conveying under any other circumstances is permitted solely under
the conditions stated below.  Sublicensing is not allowed; section 10
makes it unnecessary.

   3. Protecting Users' Legal Rights From Anti-Circumvention Law.

   No covered work shall be deemed part of an effective technological
measure under any applicable law fulfilling obligations under article
11 of the WIPO copyright treaty adopted on 20 December 1996, or
similar laws prohibiting or restricting circumvention of such
measures.

   When you convey a covered work, you waive any legal power to forbid
circumvention of technological measures to the extent such circumvention
is effected by exercising rights under this License with respect to
the covered work, and you disclaim any intention to limit operation or
modification of the work as a means of enforcing, against the work's
users, your or third parties' legal rights to forbid circumvention of
technological measures.

   4. Conveying Verbatim Copies.

   You may convey verbatim copies of the Program's source code as you
receive it, in any medium, provided that you conspicuously and
appropriately publish on each copy an appropriate copyright notice;
keep intact all notices stating that this License and any
non-permissive terms added in accord with section 7 apply to the code;
keep intact all notices of the absence of any warranty; and give all
recipients a copy of this License along with the Program.

   You may charge any price or no price for each copy that you convey,
and you may offer support or warranty protection for a fee.

   5. Conveying Modified Source Versions.

   You may convey a work based on the Program, or the modifications to
produce it from the Program, in the form of source code under the
terms of section 4, provided that you also meet all of these conditions:

     a) The work must carry prominent notices stating that you modified
     it, and giving a relevant date.

     b) The work must carry prominent notices stating that it is
     released under this License and any conditions added under section
     7.  This requirement modifies the requirement in section 4 to
     "keep intact all notices".

     c) You must license the entire work, as a whole, under this
     License to anyone who comes into possession of a copy.  This
     License will therefore apply, along with any applicable section 7
     additional terms, to the whole of the work, and all its parts,
     regardless of how they are packaged.  This License gives no
```

```
    permission to license the work in any other way, but it does not
    invalidate such permission if you have separately received it.

    d) If the work has interactive user interfaces, each must display
    Appropriate Legal Notices; however, if the Program has interactive
    interfaces that do not display Appropriate Legal Notices, your
    work need not make them do so.

  A compilation of a covered work with other separate and independent
works, which are not by their nature extensions of the covered work,
and which are not combined with it such as to form a larger program,
in or on a volume of a storage or distribution medium, is called an
"aggregate" if the compilation and its resulting copyright are not
used to limit the access or legal rights of the compilation's users
beyond what the individual works permit.  Inclusion of a covered work
in an aggregate does not cause this License to apply to the other
parts of the aggregate.

  6. Conveying Non-Source Forms.

  You may convey a covered work in object code form under the terms
of sections 4 and 5, provided that you also convey the
machine-readable Corresponding Source under the terms of this License,
in one of these ways:

    a) Convey the object code in, or embodied in, a physical product
    (including a physical distribution medium), accompanied by the
    Corresponding Source fixed on a durable physical medium
    customarily used for software interchange.

    b) Convey the object code in, or embodied in, a physical product
    (including a physical distribution medium), accompanied by a
    written offer, valid for at least three years and valid for as
    long as you offer spare parts or customer support for that product
    model, to give anyone who possesses the object code either (1) a
    copy of the Corresponding Source for all the software in the
    product that is covered by this License, on a durable physical
    medium customarily used for software interchange, for a price no
    more than your reasonable cost of physically performing this
    conveying of source, or (2) access to copy the
    Corresponding Source from a network server at no charge.

    c) Convey individual copies of the object code with a copy of the
    written offer to provide the Corresponding Source.  This
    alternative is allowed only occasionally and noncommercially, and
    only if you received the object code with such an offer, in accord
    with subsection 6b.

    d) Convey the object code by offering access from a designated
    place (gratis or for a charge), and offer equivalent access to the
    Corresponding Source in the same way through the same place at no
    further charge.  You need not require recipients to copy the
```

```
   Corresponding Source along with the object code.  If the place to
   copy the object code is a network server, the Corresponding Source
   may be on a different server (operated by you or a third party)
   that supports equivalent copying facilities, provided you maintain
   clear directions next to the object code saying where to find the
   Corresponding Source.  Regardless of what server hosts the
   Corresponding Source, you remain obligated to ensure that it is
   available for as long as needed to satisfy these requirements.

   e) Convey the object code using peer-to-peer transmission, provided
   you inform other peers where the object code and Corresponding
   Source of the work are being offered to the general public at no
   charge under subsection 6d.

 A separable portion of the object code, whose source code is excluded
from the Corresponding Source as a System Library, need not be
included in conveying the object code work.

 A "User Product" is either (1) a "consumer product", which means any
tangible personal property which is normally used for personal, family,
or household purposes, or (2) anything designed or sold for incorporation
into a dwelling.  In determining whether a product is a consumer product,
doubtful cases shall be resolved in favor of coverage.  For a particular
product received by a particular user, "normally used" refers to a
typical or common use of that class of product, regardless of the status
of the particular user or of the way in which the particular user
actually uses, or expects or is expected to use, the product.  A product
is a consumer product regardless of whether the product has substantial
commercial, industrial or non-consumer uses, unless such uses represent
the only significant mode of use of the product.

 "Installation Information" for a User Product means any methods,
procedures, authorization keys, or other information required to install
and execute modified versions of a covered work in that User Product from
a modified version of its Corresponding Source.  The information must
suffice to ensure that the continued functioning of the modified object
code is in no case prevented or interfered with solely because
modification has been made.

 If you convey an object code work under this section in, or with, or
specifically for use in, a User Product, and the conveying occurs as
part of a transaction in which the right of possession and use of the
User Product is transferred to the recipient in perpetuity or for a
fixed term (regardless of how the transaction is characterized), the
Corresponding Source conveyed under this section must be accompanied
by the Installation Information.  But this requirement does not apply
if neither you nor any third party retains the ability to install
modified object code on the User Product (for example, the work has
been installed in ROM).

 The requirement to provide Installation Information does not include a
requirement to continue to provide support service, warranty, or updates
```

```
for a work that has been modified or installed by the recipient, or for
the User Product in which it has been modified or installed. Access to a
network may be denied when the modification itself materially and
adversely affects the operation of the network or violates the rules and
protocols for communication across the network.

  Corresponding Source conveyed, and Installation Information provided,
in accord with this section must be in a format that is publicly
documented (and with an implementation available to the public in
source code form), and must require no special password or key for
unpacking, reading or copying.

  7. Additional Terms.

  "Additional permissions" are terms that supplement the terms of this
License by making exceptions from one or more of its conditions.
Additional permissions that are applicable to the entire Program shall
be treated as though they were included in this License, to the extent
that they are valid under applicable law. If additional permissions
apply only to part of the Program, that part may be used separately
under those permissions, but the entire Program remains governed by
this License without regard to the additional permissions.

  When you convey a copy of a covered work, you may at your option
remove any additional permissions from that copy, or from any part of
it. (Additional permissions may be written to require their own
removal in certain cases when you modify the work.) You may place
additional permissions on material, added by you to a covered work,
for which you have or can give appropriate copyright permission.

  Notwithstanding any other provision of this License, for material you
add to a covered work, you may (if authorized by the copyright holders of
that material) supplement the terms of this License with terms:

    a) Disclaiming warranty or limiting liability differently from the
    terms of sections 15 and 16 of this License; or

    b) Requiring preservation of specified reasonable legal notices or
    author attributions in that material or in the Appropriate Legal
    Notices displayed by works containing it; or

    c) Prohibiting misrepresentation of the origin of that material, or
    requiring that modified versions of such material be marked in
    reasonable ways as different from the original version; or

    d) Limiting the use for publicity purposes of names of licensors or
    authors of the material; or

    e) Declining to grant rights under trademark law for use of some
    trade names, trademarks, or service marks; or

    f) Requiring indemnification of licensors and authors of that
```

```
    material by anyone who conveys the material (or modified versions of
    it) with contractual assumptions of liability to the recipient, for
    any liability that these contractual assumptions directly impose on
    those licensors and authors.

  All other non-permissive additional terms are considered "further
restrictions" within the meaning of section 10.  If the Program as you
received it, or any part of it, contains a notice stating that it is
governed by this License along with a term that is a further
restriction, you may remove that term.  If a license document contains
a further restriction but permits relicensing or conveying under this
License, you may add to a covered work material governed by the terms
of that license document, provided that the further restriction does
not survive such relicensing or conveying.

  If you add terms to a covered work in accord with this section, you
must place, in the relevant source files, a statement of the
additional terms that apply to those files, or a notice indicating
where to find the applicable terms.

  Additional terms, permissive or non-permissive, may be stated in the
form of a separately written license, or stated as exceptions;
the above requirements apply either way.

  8. Termination.

  You may not propagate or modify a covered work except as expressly
provided under this License.  Any attempt otherwise to propagate or
modify it is void, and will automatically terminate your rights under
this License (including any patent licenses granted under the third
paragraph of section 11).

  However, if you cease all violation of this License, then your
license from a particular copyright holder is reinstated (a)
provisionally, unless and until the copyright holder explicitly and
finally terminates your license, and (b) permanently, if the copyright
holder fails to notify you of the violation by some reasonable means
prior to 60 days after the cessation.

  Moreover, your license from a particular copyright holder is
reinstated permanently if the copyright holder notifies you of the
violation by some reasonable means, this is the first time you have
received notice of violation of this License (for any work) from that
copyright holder, and you cure the violation prior to 30 days after
your receipt of the notice.

  Termination of your rights under this section does not terminate the
licenses of parties who have received copies or rights from you under
this License.  If your rights have been terminated and not permanently
reinstated, you do not qualify to receive new licenses for the same
material under section 10.
```

```
9. Acceptance Not Required for Having Copies.

  You are not required to accept this License in order to receive or
run a copy of the Program.  Ancillary propagation of a covered work
occurring solely as a consequence of using peer-to-peer transmission
to receive a copy likewise does not require acceptance.  However,
nothing other than this License grants you permission to propagate or
modify any covered work.  These actions infringe copyright if you do
not accept this License.  Therefore, by modifying or propagating a
covered work, you indicate your acceptance of this License to do so.

  10. Automatic Licensing of Downstream Recipients.

  Each time you convey a covered work, the recipient automatically
receives a license from the original licensors, to run, modify and
propagate that work, subject to this License.  You are not responsible
for enforcing compliance by third parties with this License.

  An "entity transaction" is a transaction transferring control of an
organization, or substantially all assets of one, or subdividing an
organization, or merging organizations.  If propagation of a covered
work results from an entity transaction, each party to that
transaction who receives a copy of the work also receives whatever
licenses to the work the party's predecessor in interest had or could
give under the previous paragraph, plus a right to possession of the
Corresponding Source of the work from the predecessor in interest, if
the predecessor has it or can get it with reasonable efforts.

  You may not impose any further restrictions on the exercise of the
rights granted or affirmed under this License.  For example, you may
not impose a license fee, royalty, or other charge for exercise of
rights granted under this License, and you may not initiate litigation
(including a cross-claim or counterclaim in a lawsuit) alleging that
any patent claim is infringed by making, using, selling, offering for
sale, or importing the Program or any portion of it.

  11. Patents.

  A "contributor" is a copyright holder who authorizes use under this
License of the Program or a work on which the Program is based.  The
work thus licensed is called the contributor's "contributor version".

  A contributor's "essential patent claims" are all patent claims
owned or controlled by the contributor, whether already acquired or
hereafter acquired, that would be infringed by some manner, permitted
by this License, of making, using, or selling its contributor version,
but do not include claims that would be infringed only as a
consequence of further modification of the contributor version.  For
purposes of this definition, "control" includes the right to grant
patent sublicenses in a manner consistent with the requirements of
this License.
```

```
   Each contributor grants you a non-exclusive, worldwide, royalty-free
patent license under the contributor's essential patent claims, to
make, use, sell, offer for sale, import and otherwise run, modify and
propagate the contents of its contributor version.

   In the following three paragraphs, a "patent license" is any express
agreement or commitment, however denominated, not to enforce a patent
(such as an express permission to practice a patent or covenant not to
sue for patent infringement).  To "grant" such a patent license to a
party means to make such an agreement or commitment not to enforce a
patent against the party.

   If you convey a covered work, knowingly relying on a patent license,
and the Corresponding Source of the work is not available for anyone
to copy, free of charge and under the terms of this License, through a
publicly available network server or other readily accessible means,
then you must either (1) cause the Corresponding Source to be so
available, or (2) arrange to deprive yourself of the benefit of the
patent license for this particular work, or (3) arrange, in a manner
consistent with the requirements of this License, to extend the patent
license to downstream recipients.  "Knowingly relying" means you have
actual knowledge that, but for the patent license, your conveying the
covered work in a country, or your recipient's use of the covered work
in a country, would infringe one or more identifiable patents in that
country that you have reason to believe are valid.

   If, pursuant to or in connection with a single transaction or
arrangement, you convey, or propagate by procuring conveyance of, a
covered work, and grant a patent license to some of the parties
receiving the covered work authorizing them to use, propagate, modify
or convey a specific copy of the covered work, then the patent license
you grant is automatically extended to all recipients of the covered
work and works based on it.

   A patent license is "discriminatory" if it does not include within
the scope of its coverage, prohibits the exercise of, or is
conditioned on the non-exercise of one or more of the rights that are
specifically granted under this License.  You may not convey a covered
work if you are a party to an arrangement with a third party that is
in the business of distributing software, under which you make payment
to the third party based on the extent of your activity of conveying
the work, and under which the third party grants, to any of the
parties who would receive the covered work from you, a discriminatory
patent license (a) in connection with copies of the covered work
conveyed by you (or copies made from those copies), or (b) primarily
for and in connection with specific products or compilations that
contain the covered work, unless you entered into that arrangement,
or that patent license was granted, prior to 28 March 2007.

   Nothing in this License shall be construed as excluding or limiting
any implied license or other defenses to infringement that may
otherwise be available to you under applicable patent law.
```

```
   12. No Surrender of Others' Freedom.

   If conditions are imposed on you (whether by court order, agreement or
otherwise) that contradict the conditions of this License, they do not
excuse you from the conditions of this License.  If you cannot convey a
covered work so as to satisfy simultaneously your obligations under this
License and any other pertinent obligations, then as a consequence you may
not convey it at all.  For example, if you agree to terms that obligate you
to collect a royalty for further conveying from those to whom you convey
the Program, the only way you could satisfy both those terms and this
License would be to refrain entirely from conveying the Program.

   13. Use with the GNU Affero General Public License.

   Notwithstanding any other provision of this License, you have
permission to link or combine any covered work with a work licensed
under version 3 of the GNU Affero General Public License into a single
combined work, and to convey the resulting work.  The terms of this
License will continue to apply to the part which is the covered work,
but the special requirements of the GNU Affero General Public License,
section 13, concerning interaction through a network will apply to the
combination as such.

   14. Revised Versions of this License.

   The Free Software Foundation may publish revised and/or new versions of
the GNU General Public License from time to time.  Such new versions will
be similar in spirit to the present version, but may differ in detail to
address new problems or concerns.

   Each version is given a distinguishing version number.  If the
Program specifies that a certain numbered version of the GNU General
Public License "or any later version" applies to it, you have the
option of following the terms and conditions either of that numbered
version or of any later version published by the Free Software
Foundation.  If the Program does not specify a version number of the
GNU General Public License, you may choose any version ever published
by the Free Software Foundation.

   If the Program specifies that a proxy can decide which future
versions of the GNU General Public License can be used, that proxy's
public statement of acceptance of a version permanently authorizes you
to choose that version for the Program.

   Later license versions may give you additional or different
permissions.  However, no additional obligations are imposed on any
author or copyright holder as a result of your choosing to follow a
later version.

   15. Disclaimer of Warranty.
```

```
   THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY
APPLICABLE LAW.  EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT
HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY
OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO,
THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR
PURPOSE.  THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM
IS WITH YOU.  SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF
ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

   16. Limitation of Liability.

   IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING
WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS
THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY
GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE
USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF
DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD
PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS),
EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF
SUCH DAMAGES.

   17. Interpretation of Sections 15 and 16.

   If the disclaimer of warranty and limitation of liability provided
above cannot be given local legal effect according to their terms,
reviewing courts shall apply local law that most closely approximates
an absolute waiver of all civil liability in connection with the
Program, unless a warranty or assumption of liability accompanies a
copy of the Program in return for a fee.

                     END OF TERMS AND CONDITIONS
```

14.4 LOOT Documentation

```
              GNU Free Documentation License
                Version 1.3, 3 November 2008

 Copyright (C) 2000, 2001, 2002, 2007, 2008 Free Software Foundation, Inc.
     <http://fsf.org/>
 Everyone is permitted to copy and distribute verbatim copies
 of this license document, but changing it is not allowed.

0. PREAMBLE

The purpose of this License is to make a manual, textbook, or other
functional and useful document "free" in the sense of freedom: to
```

```
assure everyone the effective freedom to copy and redistribute it,
with or without modifying it, either commercially or noncommercially.
Secondarily, this License preserves for the author and publisher a way
to get credit for their work, while not being considered responsible
for modifications made by others.

This License is a kind of "copyleft", which means that derivative
works of the document must themselves be free in the same sense.  It
complements the GNU General Public License, which is a copyleft
license designed for free software.

We have designed this License in order to use it for manuals for free
software, because free software needs free documentation: a free
program should come with manuals providing the same freedoms that the
software does.  But this License is not limited to software manuals;
it can be used for any textual work, regardless of subject matter or
whether it is published as a printed book.  We recommend this License
principally for works whose purpose is instruction or reference.

1. APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium, that
contains a notice placed by the copyright holder saying it can be
distributed under the terms of this License.  Such a notice grants a
world-wide, royalty-free license, unlimited in duration, to use that
work under the conditions stated herein.  The "Document", below,
refers to any such manual or work.  Any member of the public is a
licensee, and is addressed as "you".  You accept the license if you
copy, modify or distribute the work in a way requiring permission
under copyright law.

A "Modified Version" of the Document means any work containing the
Document or a portion of it, either copied verbatim, or with
modifications and/or translated into another language.

A "Secondary Section" is a named appendix or a front-matter section of
the Document that deals exclusively with the relationship of the
publishers or authors of the Document to the Document's overall
subject (or to related matters) and contains nothing that could fall
directly within that overall subject.  (Thus, if the Document is in
part a textbook of mathematics, a Secondary Section may not explain
any mathematics.)  The relationship could be a matter of historical
connection with the subject or with related matters, or of legal,
commercial, philosophical, ethical or political position regarding
them.

The "Invariant Sections" are certain Secondary Sections whose titles
are designated, as being those of Invariant Sections, in the notice
that says that the Document is released under this License.  If a
section does not fit the above definition of Secondary then it is not
allowed to be designated as Invariant.  The Document may contain zero
```

```
Invariant Sections.  If the Document does not identify any Invariant
Sections then there are none.

The "Cover Texts" are certain short passages of text that are listed,
as Front-Cover Texts or Back-Cover Texts, in the notice that says that
the Document is released under this License.  A Front-Cover Text may
be at most 5 words, and a Back-Cover Text may be at most 25 words.

A "Transparent" copy of the Document means a machine-readable copy,
represented in a format whose specification is available to the
general public, that is suitable for revising the document
straightforwardly with generic text editors or (for images composed of
pixels) generic paint programs or (for drawings) some widely available
drawing editor, and that is suitable for input to text formatters or
for automatic translation to a variety of formats suitable for input
to text formatters.  A copy made in an otherwise Transparent file
format whose markup, or absence of markup, has been arranged to thwart
or discourage subsequent modification by readers is not Transparent.
An image format is not Transparent if used for any substantial amount
of text.  A copy that is not "Transparent" is called "Opaque".

Examples of suitable formats for Transparent copies include plain
ASCII without markup, Texinfo input format, LaTeX input format, SGML
or XML using a publicly available DTD, and standard-conforming simple
HTML, PostScript or PDF designed for human modification.  Examples of
transparent image formats include PNG, XCF and JPG.  Opaque formats
include proprietary formats that can be read and edited only by
proprietary word processors, SGML or XML for which the DTD and/or
processing tools are not generally available, and the
machine-generated HTML, PostScript or PDF produced by some word
processors for output purposes only.

The "Title Page" means, for a printed book, the title page itself,
plus such following pages as are needed to hold, legibly, the material
this License requires to appear in the title page.  For works in
formats which do not have any title page as such, "Title Page" means
the text near the most prominent appearance of the work's title,
preceding the beginning of the body of the text.

The "publisher" means any person or entity that distributes copies of
the Document to the public.

A section "Entitled XYZ" means a named subunit of the Document whose
title either is precisely XYZ or contains XYZ in parentheses following
text that translates XYZ in another language.  (Here XYZ stands for a
specific section name mentioned below, such as "Acknowledgements",
"Dedications", "Endorsements", or "History".)  To "Preserve the Title"
of such a section when you modify the Document means that it remains a
section "Entitled XYZ" according to this definition.

The Document may include Warranty Disclaimers next to the notice which
states that this License applies to the Document.  These Warranty
```

```
Disclaimers are considered to be included by reference in this
License, but only as regards disclaiming warranties: any other
implication that these Warranty Disclaimers may have is void and has
no effect on the meaning of this License.

2. VERBATIM COPYING

You may copy and distribute the Document in any medium, either
commercially or noncommercially, provided that this License, the
copyright notices, and the license notice saying this License applies
to the Document are reproduced in all copies, and that you add no
other conditions whatsoever to those of this License.  You may not use
technical measures to obstruct or control the reading or further
copying of the copies you make or distribute.  However, you may accept
compensation in exchange for copies.  If you distribute a large enough
number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and
you may publicly display copies.

3. COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have
printed covers) of the Document, numbering more than 100, and the
Document's license notice requires Cover Texts, you must enclose the
copies in covers that carry, clearly and legibly, all these Cover
Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on
the back cover.  Both covers must also clearly and legibly identify
you as the publisher of these copies.  The front cover must present
the full title with all words of the title equally prominent and
visible.  You may add other material on the covers in addition.
Copying with changes limited to the covers, as long as they preserve
the title of the Document and satisfy these conditions, can be treated
as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit
legibly, you should put the first ones listed (as many as fit
reasonably) on the actual cover, and continue the rest onto adjacent
pages.

If you publish or distribute Opaque copies of the Document numbering
more than 100, you must either include a machine-readable Transparent
copy along with each Opaque copy, or state in or with each Opaque copy
a computer-network location from which the general network-using
public has access to download using public-standard network protocols
a complete Transparent copy of the Document, free of added material.
If you use the latter option, you must take reasonably prudent steps,
when you begin distribution of Opaque copies in quantity, to ensure
that this Transparent copy will remain thus accessible at the stated
location until at least one year after the last time you distribute an
Opaque copy (directly or through your agents or retailers) of that
```

```
edition to the public.

It is requested, but not required, that you contact the authors of the
Document well before redistributing any large number of copies, to
give them a chance to provide you with an updated version of the
Document.

4. MODIFICATIONS

You may copy and distribute a Modified Version of the Document under
the conditions of sections 2 and 3 above, provided that you release
the Modified Version under precisely this License, with the Modified
Version filling the role of the Document, thus licensing distribution
and modification of the Modified Version to whoever possesses a copy
of it.  In addition, you must do these things in the Modified Version:

A. Use in the Title Page (and on the covers, if any) a title distinct
   from that of the Document, and from those of previous versions
   (which should, if there were any, be listed in the History section
   of the Document).  You may use the same title as a previous version
   if the original publisher of that version gives permission.
B. List on the Title Page, as authors, one or more persons or entities
   responsible for authorship of the modifications in the Modified
   Version, together with at least five of the principal authors of the
   Document (all of its principal authors, if it has fewer than five),
   unless they release you from this requirement.
C. State on the Title page the name of the publisher of the
   Modified Version, as the publisher.
D. Preserve all the copyright notices of the Document.
E. Add an appropriate copyright notice for your modifications
   adjacent to the other copyright notices.
F. Include, immediately after the copyright notices, a license notice
   giving the public permission to use the Modified Version under the
   terms of this License, in the form shown in the Addendum below.
G. Preserve in that license notice the full lists of Invariant Sections
   and required Cover Texts given in the Document's license notice.
H. Include an unaltered copy of this License.
I. Preserve the section Entitled "History", Preserve its Title, and add
   to it an item stating at least the title, year, new authors, and
   publisher of the Modified Version as given on the Title Page.  If
   there is no section Entitled "History" in the Document, create one
   stating the title, year, authors, and publisher of the Document as
   given on its Title Page, then add an item describing the Modified
   Version as stated in the previous sentence.
J. Preserve the network location, if any, given in the Document for
   public access to a Transparent copy of the Document, and likewise
   the network locations given in the Document for previous versions
   it was based on.  These may be placed in the "History" section.
   You may omit a network location for a work that was published at
   least four years before the Document itself, or if the original
   publisher of the version it refers to gives permission.
```

```
K. For any section Entitled "Acknowledgements" or "Dedications",
   Preserve the Title of the section, and preserve in the section all
   the substance and tone of each of the contributor acknowledgements
   and/or dedications given therein.
L. Preserve all the Invariant Sections of the Document,
   unaltered in their text and in their titles.  Section numbers
   or the equivalent are not considered part of the section titles.
M. Delete any section Entitled "Endorsements".  Such a section
   may not be included in the Modified Version.
N. Do not retitle any existing section to be Entitled "Endorsements"
   or to conflict in title with any Invariant Section.
O. Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or
appendices that qualify as Secondary Sections and contain no material
copied from the Document, you may at your option designate some or all
of these sections as invariant.  To do this, add their titles to the
list of Invariant Sections in the Modified Version's license notice.
These titles must be distinct from any other section titles.

You may add a section Entitled "Endorsements", provided it contains
nothing but endorsements of your Modified Version by various
parties--for example, statements of peer review or that the text has
been approved by an organization as the authoritative definition of a
standard.

You may add a passage of up to five words as a Front-Cover Text, and a
passage of up to 25 words as a Back-Cover Text, to the end of the list
of Cover Texts in the Modified Version.  Only one passage of
Front-Cover Text and one of Back-Cover Text may be added by (or
through arrangements made by) any one entity.  If the Document already
includes a cover text for the same cover, previously added by you or
by arrangement made by the same entity you are acting on behalf of,
you may not add another; but you may replace the old one, on explicit
permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License
give permission to use their names for publicity for or to assert or
imply endorsement of any Modified Version.

5. COMBINING DOCUMENTS

You may combine the Document with other documents released under this
License, under the terms defined in section 4 above for modified
versions, provided that you include in the combination all of the
Invariant Sections of all of the original documents, unmodified, and
list them all as Invariant Sections of your combined work in its
license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and
multiple identical Invariant Sections may be replaced with a single
```

```
copy.  If there are multiple Invariant Sections with the same name but
different contents, make the title of each such section unique by
adding at the end of it, in parentheses, the name of the original
author or publisher of that section if known, or else a unique number.
Make the same adjustment to the section titles in the list of
Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled "History"
in the various original documents, forming one section Entitled
"History"; likewise combine any sections Entitled "Acknowledgements",
and any sections Entitled "Dedications".  You must delete all sections
Entitled "Endorsements".

6. COLLECTIONS OF DOCUMENTS

You may make a collection consisting of the Document and other
documents released under this License, and replace the individual
copies of this License in the various documents with a single copy
that is included in the collection, provided that you follow the rules
of this License for verbatim copying of each of the documents in all
other respects.

You may extract a single document from such a collection, and
distribute it individually under this License, provided you insert a
copy of this License into the extracted document, and follow this
License in all other respects regarding verbatim copying of that
document.

7. AGGREGATION WITH INDEPENDENT WORKS

A compilation of the Document or its derivatives with other separate
and independent documents or works, in or on a volume of a storage or
distribution medium, is called an "aggregate" if the copyright
resulting from the compilation is not used to limit the legal rights
of the compilation's users beyond what the individual works permit.
When the Document is included in an aggregate, this License does not
apply to the other works in the aggregate which are not themselves
derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these
copies of the Document, then if the Document is less than one half of
the entire aggregate, the Document's Cover Texts may be placed on
covers that bracket the Document within the aggregate, or the
electronic equivalent of covers if the Document is in electronic form.
Otherwise they must appear on printed covers that bracket the whole
aggregate.

8. TRANSLATION
```

```
Translation is considered a kind of modification, so you may
distribute translations of the Document under the terms of section 4.
Replacing Invariant Sections with translations requires special
permission from their copyright holders, but you may include
translations of some or all Invariant Sections in addition to the
original versions of these Invariant Sections.  You may include a
translation of this License, and all the license notices in the
Document, and any Warranty Disclaimers, provided that you also include
the original English version of this License and the original versions
of those notices and disclaimers.  In case of a disagreement between
the translation and the original version of this License or a notice
or disclaimer, the original version will prevail.

If a section in the Document is Entitled "Acknowledgements",
"Dedications", or "History", the requirement (section 4) to Preserve
its Title (section 1) will typically require changing the actual
title.

9. TERMINATION

You may not copy, modify, sublicense, or distribute the Document
except as expressly provided under this License.  Any attempt
otherwise to copy, modify, sublicense, or distribute it is void, and
will automatically terminate your rights under this License.

However, if you cease all violation of this License, then your license
from a particular copyright holder is reinstated (a) provisionally,
unless and until the copyright holder explicitly and finally
terminates your license, and (b) permanently, if the copyright holder
fails to notify you of the violation by some reasonable means prior to
60 days after the cessation.

Moreover, your license from a particular copyright holder is
reinstated permanently if the copyright holder notifies you of the
violation by some reasonable means, this is the first time you have
received notice of violation of this License (for any work) from that
copyright holder, and you cure the violation prior to 30 days after
your receipt of the notice.

Termination of your rights under this section does not terminate the
licenses of parties who have received copies or rights from you under
this License.  If your rights have been terminated and not permanently
reinstated, receipt of a copy of some or all of the same material does
not give you any rights to use it.

10. FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the
GNU Free Documentation License from time to time.  Such new versions
will be similar in spirit to the present version, but may differ in
```

```
detail to address new problems or concerns.  See
http://www.gnu.org/copyleft/.

Each version of the License is given a distinguishing version number.
If the Document specifies that a particular numbered version of this
License "or any later version" applies to it, you have the option of
following the terms and conditions either of that specified version or
of any later version that has been published (not as a draft) by the
Free Software Foundation.  If the Document does not specify a version
number of this License, you may choose any version ever published (not
as a draft) by the Free Software Foundation.  If the Document
specifies that a proxy can decide which future versions of this
License can be used, that proxy's public statement of acceptance of a
version permanently authorizes you to choose that version for the
Document.

11. RELICENSING

"Massive Multiauthor Collaboration Site" (or "MMC Site") means any
World Wide Web server that publishes copyrightable works and also
provides prominent facilities for anybody to edit those works.  A
public wiki that anybody can edit is an example of such a server.  A
"Massive Multiauthor Collaboration" (or "MMC") contained in the site
means any set of copyrightable works thus published on the MMC site.

"CC-BY-SA" means the Creative Commons Attribution-Share Alike 3.0
license published by Creative Commons Corporation, a not-for-profit
corporation with a principal place of business in San Francisco,
California, as well as future copyleft versions of that license
published by that same organization.

"Incorporate" means to publish or republish a Document, in whole or in
part, as part of another Document.

An MMC is "eligible for relicensing" if it is licensed under this
License, and if all works that were first published under this License
somewhere other than this MMC, and subsequently incorporated in whole or
in part into the MMC, (1) had no cover texts or invariant sections, and
(2) were thus incorporated prior to November 1, 2008.

The operator of an MMC Site may republish an MMC contained in the site
under CC-BY-SA on the same site at any time before August 1, 2009,
provided the MMC is eligible for relicensing.

                           Apache License
                     Version 2.0, January 2004
                  http://www.apache.org/licenses/

 TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

 1. Definitions.

    "License" shall mean the terms and conditions for use, reproduction,
    and distribution as defined by Sections 1 through 9 of this document.

    "Licensor" shall mean the copyright owner or entity authorized by
    the copyright owner that is granting the License.

    "Legal Entity" shall mean the union of the acting entity and all
    other entities that control, are controlled by, or are under common
    control with that entity. For the purposes of this definition,
    "control" means (i) the power, direct or indirect, to cause the
    direction or management of such entity, whether by contract or
    otherwise, or (ii) ownership of fifty percent (50%) or more of the
    outstanding shares, or (iii) beneficial ownership of such entity.

    "You" (or "Your") shall mean an individual or Legal Entity
    exercising permissions granted by this License.

    "Source" form shall mean the preferred form for making modifications,
    including but not limited to software source code, documentation
    source, and configuration files.

    "Object" form shall mean any form resulting from mechanical
    transformation or translation of a Source form, including but
    not limited to compiled object code, generated documentation,
    and conversions to other media types.

    "Work" shall mean the work of authorship, whether in Source or
    Object form, made available under the License, as indicated by a
    copyright notice that is included in or attached to the work
    (an example is provided in the Appendix below).

    "Derivative Works" shall mean any work, whether in Source or Object
    form, that is based on (or derived from) the Work and for which the
    editorial revisions, annotations, elaborations, or other modifications
    represent, as a whole, an original work of authorship. For the purposes
    of this License, Derivative Works shall not include works that remain
    separable from, or merely link (or bind by name) to the interfaces of,
    the Work and Derivative Works thereof.

    "Contribution" shall mean any work of authorship, including
    the original version of the Work and any modifications or additions
```

```
            to that Work or Derivative Works thereof, that is intentionally
            submitted to Licensor for inclusion in the Work by the copyright owner
            or by an individual or Legal Entity authorized to submit on behalf of
            the copyright owner. For the purposes of this definition, "submitted"
            means any form of electronic, verbal, or written communication sent
            to the Licensor or its representatives, including but not limited to
            communication on electronic mailing lists, source code control systems,
            and issue tracking systems that are managed by, or on behalf of, the
            Licensor for the purpose of discussing and improving the Work, but
            excluding communication that is conspicuously marked or otherwise
            designated in writing by the copyright owner as "Not a Contribution."

            "Contributor" shall mean Licensor and any individual or Legal Entity
            on behalf of whom a Contribution has been received by Licensor and
            subsequently incorporated within the Work.

   2. Grant of Copyright License. Subject to the terms and conditions of
      this License, each Contributor hereby grants to You a perpetual,
      worldwide, non-exclusive, no-charge, royalty-free, irrevocable
      copyright license to reproduce, prepare Derivative Works of,
      publicly display, publicly perform, sublicense, and distribute the
      Work and such Derivative Works in Source or Object form.

   3. Grant of Patent License. Subject to the terms and conditions of
      this License, each Contributor hereby grants to You a perpetual,
      worldwide, non-exclusive, no-charge, royalty-free, irrevocable
      (except as stated in this section) patent license to make, have made,
      use, offer to sell, sell, import, and otherwise transfer the Work,
      where such license applies only to those patent claims licensable
      by such Contributor that are necessarily infringed by their
      Contribution(s) alone or by combination of their Contribution(s)
      with the Work to which such Contribution(s) was submitted. If You
      institute patent litigation against any entity (including a
      cross-claim or counterclaim in a lawsuit) alleging that the Work
      or a Contribution incorporated within the Work constitutes direct
      or contributory patent infringement, then any patent licenses
      granted to You under this License for that Work shall terminate
      as of the date such litigation is filed.

   4. Redistribution. You may reproduce and distribute copies of the
      Work or Derivative Works thereof in any medium, with or without
      modifications, and in Source or Object form, provided that You
      meet the following conditions:

      (a) You must give any other recipients of the Work or
          Derivative Works a copy of this License; and

      (b) You must cause any modified files to carry prominent notices
          stating that You changed the files; and

      (c) You must retain, in the Source form of any Derivative Works
          that You distribute, all copyright, patent, trademark, and
```

```
        attribution notices from the Source form of the Work,
        excluding those notices that do not pertain to any part of
        the Derivative Works; and

    (d) If the Work includes a "NOTICE" text file as part of its
        distribution, then any Derivative Works that You distribute must
        include a readable copy of the attribution notices contained
        within such NOTICE file, excluding those notices that do not
        pertain to any part of the Derivative Works, in at least one
        of the following places: within a NOTICE text file distributed
        as part of the Derivative Works; within the Source form or
        documentation, if provided along with the Derivative Works; or,
        within a display generated by the Derivative Works, if and
        wherever such third-party notices normally appear. The contents
        of the NOTICE file are for informational purposes only and
        do not modify the License. You may add Your own attribution
        notices within Derivative Works that You distribute, alongside
        or as an addendum to the NOTICE text from the Work, provided
        that such additional attribution notices cannot be construed
        as modifying the License.

    You may add Your own copyright statement to Your modifications and
    may provide additional or different license terms and conditions
    for use, reproduction, or distribution of Your modifications, or
    for any such Derivative Works as a whole, provided Your use,
    reproduction, and distribution of the Work otherwise complies with
    the conditions stated in this License.

 5. Submission of Contributions. Unless You explicitly state otherwise,
    any Contribution intentionally submitted for inclusion in the Work
    by You to the Licensor shall be under the terms and conditions of
    this License, without any additional terms or conditions.
    Notwithstanding the above, nothing herein shall supersede or modify
    the terms of any separate license agreement you may have executed
    with Licensor regarding such Contributions.

 6. Trademarks. This License does not grant permission to use the trade
    names, trademarks, service marks, or product names of the Licensor,
    except as required for reasonable and customary use in describing the
    origin of the Work and reproducing the content of the NOTICE file.

 7. Disclaimer of Warranty. Unless required by applicable law or
    agreed to in writing, Licensor provides the Work (and each
    Contributor provides its Contributions) on an "AS IS" BASIS,
    WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
    implied, including, without limitation, any warranties or conditions
    of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
    PARTICULAR PURPOSE. You are solely responsible for determining the
    appropriateness of using or redistributing the Work and assume any
    risks associated with Your exercise of permissions under this License.

 8. Limitation of Liability. In no event and under no legal theory,
```

```
      whether in tort (including negligence), contract, or otherwise,
      unless required by applicable law (such as deliberate and grossly
      negligent acts) or agreed to in writing, shall any Contributor be
      liable to You for damages, including any direct, indirect, special,
      incidental, or consequential damages of any character arising as a
      result of this License or out of the use or inability to use the
      Work (including but not limited to damages for loss of goodwill,
      work stoppage, computer failure or malfunction, or any and all
      other commercial damages or losses), even if such Contributor
      has been advised of the possibility of such damages.

   9. Accepting Warranty or Additional Liability. While redistributing
      the Work or Derivative Works thereof, You may choose to offer,
      and charge a fee for, acceptance of support, warranty, indemnity,
      or other liability obligations and/or rights consistent with this
      License. However, in accepting such obligations, You may act only
      on Your own behalf and on Your sole responsibility, not on behalf
      of any other Contributor, and only if You agree to indemnify,
      defend, and hold each Contributor harmless for any liability
      incurred by, or claims asserted against, such Contributor by reason
      of your accepting any such warranty or additional liability.

   END OF TERMS AND CONDITIONS

   APPENDIX: How to apply the Apache License to your work.

      To apply the Apache License to your work, attach the following
      boilerplate notice, with the fields enclosed by brackets "[]"
      replaced with your own identifying information. (Don't include
      the brackets!)  The text should be enclosed in the appropriate
      comment syntax for the file format. We also recommend that a
      file or class name and description of purpose be included on the
      same "printed page" as the copyright notice for easier
      identification within third-party archives.

   Copyright [yyyy] [name of copyright owner]

   Licensed under the Apache License, Version 2.0 (the "License");
   you may not use this file except in compliance with the License.
   You may obtain a copy of the License at

       http://www.apache.org/licenses/LICENSE-2.0

   Unless required by applicable law or agreed to in writing, software
   distributed under the License is distributed on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.
   See the License for the specific language governing permissions and
   limitations under the License.
